## Highlights

- Post-doc at Applied Intelligent System Laboratory (AISLab), Dipartimento di Informatica Giovanni Degli Antoni, Università degli Studi di Milano, since November 2016.
- Ph.D. in Information Technology from Artificial Intelligence and Robotics Lab (AIRLab), Dipartimento di Elettronica, Informazione e Bioingegneria, Politecnico di Milano (2017). Advisor prof. Francesco Amigoni.
- Research interests in *semantic mapping* for autonomous mobile robots, focusing on techniques to retrieve the 2D structure of indoor buildings and Long-Term Autonomy for *Socially Assistive Robots*.
- Researcher, leader of WP7 (Community-Based Activity Center) for the H2020 research project *MoveCare*, Multiple-actOrs Virtual Empathic CAREgiver for the Elder, since November 2016. The project, which involves a consortium of 12 European partners, aims to develop a framework integrating a robotic platform with an IoT-based domotic system and a virtual caregiver, in order to provide transparent monitoring and social interventions for elders at home. A 3 months pilot with 30 end-users and 10 autonomous mobile robots is being held in Spain and in Italy during the final months of 2019 and early 2020.
- Winner of the 2012 RoboCup Virtual Robot Competition Rescue Simulation League in Mexico City, Mexico. I was part of the Politecnico di Milano team under the supervision of prof. F. Amigoni.
- Publications: 2 papers in peer-reviewed international journals, 14 conference papers, 8 workshop and demo papers, and 3 technical papers. Academic age: 6 years.
- Organization and management of on-field tests of the final prototype of the MoveCare project with end-user in the assisted living facility of Servimayor, Jarandilla de la Vera, Spain, and in house apartments of 15 elders in Milan (Italy) and Badajoz (Extremadura, Spain), for 10 weeks. Tests were performed with the joint collaboration of Junta de Extremadura, University of Malaga, Politecnico di Milano, and Università degli Studi di Milano, within the MoveCare project, and were covered by the main TV news broadcast of Spain and Italy, and by radio and local and national newspapers as well.
- Organization and management of five pilot trial experiments with end-users in a study for cognitive assessment and stimulation of elderly people using a framework that integrates digital activities and an autonomous mobile robot. These pilot studies, with more than 100 subjects evaluated, are performed with the joint collaboration of Policlinico IRCCS Ca' Granda Milano, Fondazione Don Gnocchi, University of Manchester, University of Plymouth, Politecnico di Milano, and Università degli Studi di Milano, within the MoveCare project.
- Cosupervisor of 13 master theses at Politecnico di Milano.
- Teaching assistant for undergraduate course of Informatica B (2013-2017) and Fondamenti di Informatica (2014-2019) at Politecnico di Milano.

# Short bio

Matteo Luperto (Garbagnate Milanese, Italy, 22 January 1988) is a postdoctoral researcher with the Dipartimento di Informatica Giovanni Degli Antoni at the Università degli Studi di Milano (Italy). He received his Ph.D. in Information Technology from the Politecnico di Milano (Italy) in 2017. His main research interests are in *semantic mapping for autonomous mobile robots* and *assistive and collaborative mobile robotics*.

## Position and Education

### RECORD OF EMPLOYMENT

*November 2016 – present*

Research assistant (Post-Doc) at the Dipartimento di Informatica Giovanni Degli Antoni, Università degli Studi di Milano, Applied Intelligent System Lab (AISLab - prof. A. Borghese), working on the H2020 Project “MoveCare - Multiple-Actors Virtual Empathic Caregiver for the Elder”.

MoveCare integrates an autonomous robotic platform, developed within the project, with an IoT-based domotic system, smart objects, a virtual community, and an activity center to provide, through Artificial Intelligence, assistance, activities, and transparent monitoring to the elder at home. A pilot study, with the deployment of the full architecture of the system and using 10 autonomous mobile robots for 3 consecutive months, is being held, inside the house of 30 end-users both in Spain and in Italy, during the last months of the project, end of 2019 and beginning of 2020.

*Role:* Leader of WP7 of the Movecare Project - Community based Activity Center. Development of the community-based activity center, development and testing of digitalized cognitive tests for transparent cognitive evaluation of elders at home, integration of the community based activity center with the robotic platform and domotic sensors, integration of the IoT platform and of the cloud-based cognitive activities with the autonomous robot, development of functionalities for the robot, testing and evaluation of the MoveCare framework in pre-pilot studies with end-users for continuous integration, and integration between all components developed by the partners of the MoveCare consortium for the final pilot.

*November 2013 – November 2016*

Ph.D. student at the Artificial Intelligence and Robotics Lab (AIRLab), Dipartimento di Elettronica Informazione e Bioingegneria, Politecnico di Milano. Advisor: prof. Francesco Amigoni. Research topic: Semantic modeling of indoor environments for autonomous mobile robots integrating a priori knowledge about the structure of the building.

*February 2013 – September 2013*

Internship at the HOC-LAB - Hypermedia Open CenterLab - Dipartimento di Elettronica e Informazione of the Politecnico di Milano, prof. Paolo Paolini, working on the development of the online storytelling platform for e-learning “1001Storia”. The platform, still used today for the Policultura Project, has been used by more than 1000 students and teachers for e-learning activities.

### EDUCATION

- Ph.D. in Information Technology at Politecnico di Milano, Milano, Italy.  
November 2013 - February 2017.  
Title: *Semantic Modeling of the Global Structure of Buildings*  
Advisor: *F. Amigoni*

Reviewers: *M. Hanheide (University of Lincoln), F. Pecora (University of Örebro)*

Thesis: <https://www.politesi.polimi.it/handle/10589/132104>

- M.Sc. in Computer Science Engineering at Politecnico di Milano, Milano, Italy.  
September 2010 - December 2012 Grade: 110L/110.  
Thesis title: *Semantic Labeling of Places Using Building Typology Knowledge in Mobile Robotics*,  
Advisor: *F. Amigoni*
- B.Sc. in Computer Science Engineering at Politecnico di Milano, Milano, Italy.  
September 2007 - September 2010. Grade: 110L/110.  
Thesis title: *Integration of Visual Landmarks in a ScanSLAM Algorithm*,  
Advisor: *M. Matteucci*
- High School diploma at Liceo Scientifico G.B.Grassi, Saronno, Italy. 2007. Grade: 89/100.

## VISITING EXPERIENCES

- Visiting researcher at the MACHine Perception and Intelligent Robotics (MAPIR) Laboratory, Prof, Javier Gonzalez-Jimenez, University of Malaga, - July 2019.
- Visiting researcher at Department of Computer Science - Declarative Languages and Artificial Intelligence, Prof. Luc de Raedt, KU Leuven - June 2015.

## EDUCATION - OTHERS

- Participation to the summer school on “Long-Term Autonomy for Mobile Robotics” (LAMoR), Lincoln Centre for Autonomous Systems (L-CAS), Lincoln University, UK (August/September 2015).
- Participation to the second Örebro Winter School on “Artificial Intelligence and Robotics” (LUCIA), Örebro Universitet, Sweden (December 2014).
- Exchange M.Sc student in Computer Science Engineering within the ERASMUS project at Chalmers Tekniska Högskola, Göteborg, Sweden (August 2010 - January 2011).

## SCHOLARSHIPS

- Scholarship from Ministero dell’Istruzione, dell’Università e della Ricerca for attending the XXIX PhD Cycle (November 2013 - November 2016).
- ERASMUS Scholarship as an exchange student at Chalmers Tekniska Högskola, Göteborg, Sweden (August 2010 - January 2011).

## Awards

- AW.1. Best paper award nomination for “Robot Exploration Using Knowledge of Inaccurate Floor Plans” [IC.3], European Conference on Mobile Robots (ECMR 2019), Prague (Czech Republic), September 2019.
- AW.2. Best paper award nomination for “Extracting Structure of Buildings using Layout Reconstruction” [IC.9], 15th International Conference on Intelligent Autonomous Systems (IAS-15), Baden-Baden (Germany), June 2018.

- AW.3. PhD Scholarship from Ministero dell'Istruzione, dell'Università e della Ricerca for attending the XXIX PhD Cycle at Dipartimento di Elettronica, Informazione e Bioingegneria, Politecnico di Milano, 2013.
- AW.4. Winner of the RoboCup Virtual Robot Competition Rescue Simulation League, RoboCup 2012, with "PoAReT"- Politecnico di Milano Autonomous Rescue Team [OH.4], Mexico City, June 2012.

# Professional Activities

## NATIONAL AND INTERNATIONAL RESEARCH PROJECTS

Matteo Luperto has contributed actively in the following research projects:

- *MoveCare - Multiple-Actors Virtual Empathic Caregiver for the Elder*,  
PROGRAMME H2020-ICT-26B-2016  
(Project Leader: prof. A. Borghese - AISLab - Università degli Studi di Milano)
- *RoboCup Rescue 2012: Autonomous Mobile Robots for Search and Rescue Application*,  
FONDAZIONE BANCA DEL MONTE DI LOMBARDIA  
(Project Leader: prof. F. Amigoni - AIRLab - Politecnico di Milano)

## PROGRAM COMMITTEE MEMBERSHIP

Matteo Luperto was a member of the Program Committee of the following conferences:

- Association for the Advancement of Artificial Intelligence (AAAI), 2020 (AAAI20)
- International Conference on Autonomous Agents and Multiagent Systems (AAMAS), 2019 (AAMAS19), 2020 (AAMAS20).
- European Conference on Mobile Robots (ECMR), 2019 (ECMR19).
- Workshop on Autonomous Robots and Multirobot Systems (ARMS) at the International Conference on Autonomous Agents and Multiagent Systems (AAMAS), 2019 (ARMS19).

## REFeree SERVICES

Matteo Luperto is a reviewer for the following journals:

- IEEE Transaction on Robotics (T-RO), 2019.
- Robotics and Autonomous Systems, 2017, 2019.
- Autonomous Robots, 2019.
- Engineering Application of Artificial Intelligence (EAAI), 2019.
- Control Engineering Practice, 2019, 2020.
- IEEE Robotics and Automation Letters (RA-L), 2019.
- Interaction Studies, 2019.
- IEEE Transactions on Automation Science and Engineering (T-ASE), 2018, 2019.
- MDPI Applied Sciences, 2018, 2019.
- Remote Sensing, 2019.
- Transaction on GIS, 2019.

Matteo Luperto is a reviewer for the following conferences:

- IEEE International Conference on Robotics and Automation, 2017 (ICRA2017), 2018 (ICRA2018), 2019 (ICRA2019), 2020 (ICRA2020).
- IEEE/RSJ International Conference on Intelligent Robots and Systems, 2015 (IROS2015), 2016 (IROS2016), 2017 (IROS2017), 2018 (IROS2018), 2019 (IROS2019).
- International Conference on Autonomous Agents and Multiagent Systems (AAMAS), 2019 (AAMAS19), 2020 (AAMAS20).
- Association for the Advancement of Artificial Intelligence (AAAI), 2020 (AAAI20)
- European Conference on Mobile Robots (ECMR), 2019 (ECMR2019).
- GNB, National Congress of Bioengineering, 2018 (GNB18).
- IEEE Symposium Series on Computational Intelligence, 2014 (SSCI2014).

## MEMBERSHIPS

Matteo Luperto is member of the following associations:

- IEEE, the Institute of Electrical and Electronics Engineers.
- AI\*IA, Associazione Italiana per l'Intelligenza Artificiale.

## PARTICIPATION TO PROJECT MEETINGS

Matteo Luperto has attended the following conferences and meeting regarding the H2020 MoveCare project:

- MoveCare Program Steering Committee Meeting, Università degli Studi di Milano, Milano, Italy, December 2019.
- Presentation of the MoveCare Project at European Conference on Mobile Robots (ECMR), Prague, Czech Republic, September 2019.
- Movecare Pre-pilot Experiments with end-users at Servimayor Assisted Living Facility, Jarandilla de la Vera, Extremadura, Spain, July 2019.
- Robot Development Technical Meeting for the MoveCare Project, Stockholm-Vasteras, Sweden, May 2019.
- MoveCare Program Steering Committee Meeting, Università degli Studi di Milano, Milano, Italy, April 2019.
- MoveCare Program Steering Committee Meeting, Univesity of Malaga, Malaga, Spain, January 2019.
- MoveCare Integration Meeting, University of Malaga, Malaga, Spain, January 2019.
- Presentation of the MoveCare Project at ICT-18, Wien, Austria, December 2018.
- MoveCare Integration Meeting, Università degli Studi di Milano, Milano, Italy, November 2018.
- Presentation of the MoveCare Project at IEEE/RSJ International Conference on Intelligent Robots and Systems (IROS), Madrid, Spain, October 2018.
- MoveCare Technical Meeting for Robot Development, University of Malaga, Malaga, Spain, September 2018.
- Presentation of the MoveCare Project at the International Joint Conference on Artificial Intellicenge (IJCAI/ECAI), Stockholm, Sweden, July 2018.
- MoveCare Program Steering Committee Meeting, Univesity of Örebro, Örebro, Sweden, June 2018.
- MoveCare Integration Meeting, Università degli Studi di Milano, Milano, Italy, January 2018.
- MoveCare Program Steering Committee Meeting, EURECAT Barcelona, Barcelona, Spain, November 2017.
- MoveCare Program Steering Committee Meeting, Signal Generix, Limassol, Cyprus, June 2017.
- Presentation of the MoveCare Project at the European Robotic Forum (ERF), Edimburgh, Scotland, UK, March 2017.
- MoveCare Kick-Off Meeting, Università degli Studi di Milano, Milano, Italy, January 2017.

## CONTRIBUTION TO PILOT STUDIES

Matteo Luperto has contributed to the organization and management of the following pilot experiments with end-users for the H2020 MoveCare project, which aims to develop an assisted living framework integrating an autonomous mobile robot for the healthy aging of elders living at home:

- First pilot testing of the entire MoveCare framework with end-user in full autonomy in their own apartments for 12 weeks in Milano, Italy.  
*Description:* during this pilot study, we tested, in 7 real elder houses in Milan, the entire MoveCare framework, composed of an IoT monitoring system, a set of digital activities and an autonomous mobile robot. Four users were provided with an autonomous Giraff robot, while three users tested the platform without the robot. The systems was fully autonomous, inside the actual the elder house, for a continuous-time of 10 weeks. Evaluation of the system was done by administering a set of questionnaires to all end-users participants and by collecting datasets of the system use and functioning. The set of experiments were covered by local and national radio, and by the local and national press. A similar set of experiments was performed, in parallel, in 8 apartments in Spain, in Badajoz, Extremadura. Duration of the experiments: 10 weeks, October-December 2019. Number of participants: 7.
- Pre-pilot testing of the entire MoveCare framework with end-user in the Assisted Living facility of Servimayor, Jarandilla de la Vera, Extremadura, Spain.  
*Description:* during this pilot study, we tested, in a real elder house inside the assisted living facility of Servimayor, in Jarandilla de la Vera, Spain, the entire MoveCare framework, composed of an IoT monitoring system, a set of digital activities and an autonomous mobile robot. The functionalities of the system were tested with 8 elders who live in the facility. Functional testing of the deployed prototype was performed. Evaluation of the system was done by administering a set of questionnaires to all end-users participants. The set of experiments were covered by local and national Spanish television (in the main news broadcasting program of Spain), by local and national radio, and by the local and national press. Results of the data collected during the experiments are currently under review in a journal paper. Duration of the experiments: 2 weeks, July 2019. Number of participants: 8.
- Testing of the Community Based Activity Center (CBAC) developed by the Applied Intelligent System Lab (AISLab) for the MoveCare project, second round of testing.  
*Description:* during this pilot study we tested a multi-actor framework for cognitive, physical and social stimulation developed for elders living alone [IC.11]. We deployed the system in the house of 8 end-users of the platform, namely elders older than 65 years old and with no Mild Cognitive Impairment (MCI), collecting data about the system robustness and usability, while testing the improvements on the platform developed after a first pilot study, following the paradigm of continuous integration and human-centered design. Duration of the pilot study: 3 weeks, November 2018. Number of participants: 8.

- Testing of the use of an assistive robot for neuropsychological assessment of elders - joint collaboration with University of Manchester, University of Plymouth, and Politecnico di Milano - at the Assisted Living Lab of the Plymouth University, Plymouth, UK.  
*Description:* during this pilot study we tested the use of an assistive robot as a supervisor and virtual caregiver for elders while doing a battery of cognitive tests. We collected data about the system robustness and usability. Results obtained during the development of the platform were presented at [IC.10], [IC.1]. Duration of the pilot study: 1 week, July 2018. Number of participants: 16.
- Testing of the digitalized version of cognitive tests for elders - joint collaboration with Fondazione IRCCS Cà Granda Ospedale Maggiore Policlinico and Dipartimento di Elettronica, Informazione e Bioingegneria, Politecnico di Milano - at the Policlinico Cà Granda Ospedale Maggiore, Reparto di Geriatria.  
*Description:* during this pilot study we tested and validated against their paper-and-pencil counterparts the development of digitalized versions of cognitive tests for detecting MCI. The dataset acquired was consequently used for data analysis. The results of the pilot studies are presented in [IC.7] and are currently under review in a journal paper. Duration of the pilot study: 1 year, October 2017 - October 2018. Number of participants: 83.
- Testing of the Community Based Activity Center (CBAC) developed by the Applied Intelligent System Lab (AISLab) for the MoveCare project, first round of testing.  
*Description:* during this pilot study we tested a multi-actor framework for cognitive, physical and social stimulation developed for elders living alone [IC.11]. We deployed the system in the house of 8 end-users of the platform, namely elders older than 65 years old and with no MCI, collecting data about the system robustness and usability. Duration of the pilot study: 3 weeks, April 2018. Number of participants: 8.

## MAIN PROFESSIONAL ACTIVITY

- Technical Supervisor for the Italian translation of the divulgative book on Artificial Intelligence, “L’Intelligenza Artificiale”, part of a book series on “Challenges on Engineering”, Discovery Publisher - Edizioni Discovery, 2019.
- Invited Contributor for the innovation platform for developers of Telecom Italia, TIM OPEN, 2016.

# Talks and Seminars

## PRESENTATION AT INTERNATIONAL CONFERENCES

- “Robot Exploration Using Knowledge of Inaccurate Floor Plans”, presented at the European Conference on Mobile Robots (ECMR 2019), Prague, 2019.
- “Towards Long-Term Deployment of a Mobile Robot for at-Home Ambient Assisted Living of the Elderly”, presented at the European Conference on Mobile Robots (ECMR 2019), Prague, 2019.
- “MoveCare - Multiple-Actors Virtual Empathic Caregiver for the Elder”, presented at ICT-2018, Wien, 2018.
- “Improving Repeatability of Experiments by Automatic Evaluation of SLAM Algorithms”, presented at the IEEE/RSJ International Conference on Intelligent Robots and Systems (IROS 2018), Madrid, 2018.
- “A Multi-Actor Framework Centered around an Assistive Mobile Robot for Elderly People Living Alone”, presented at the Workshop on Robots for Assisted Living, IEEE/RSJ International Conference on Intelligent Robots and Systems (IROS 2018), Madrid, 2018.
- “Digitalized Cognitive Assessment Mediated by a Virtual Caregiver”, presented at the International Joint Conference on Artificial Intelligence (IJCAI 2018) - demo track, Stockholm, 2018.
- “Predicting Robot Performance: Why and How”, presented at the Federated AI for Robotics Workshop, joint IJCAI-ECAI/ICML/AAMAS Workshop (FAIR 2018), Stockholm, 2018.
- “A Generative Spectral Model for Semantic Mapping of Buildings”, presented at the IEEE/RSJ International Conference on Intelligent Robots and Systems (IROS 2015), Hamburg, 2015.
- “A Constructive Machine Learning Approach for Robot Exploration and Search”, presented at the IROS2015 (IEEE/RSJ International Conference on Intelligent Robots and Systems) Workshop on Machine Learning in Planning and Control of Robot Motion (MLPC17), Hamburg, 2015.
- “Exploiting Structural Properties of Buildings Towards General Semantic Mapping Systems”, presented at the Thirteen International Conference on Intelligent Autonomous Systems (IAS-13), Padova, 2014.
- “Towards Generalization of Experimental Results for Autonomous Robots”, presented at IAS-13, Thirteen International Conference on Intelligent Autonomous Systems) Workshop on New Research Frontiers for Intelligent Autonomous Systems (NRF-IAS-2014), Venice, 2014.

## SEMINARS

- “Towards long-term robot autonomy integrating AI and Robotics: the STRANDS example”, Dipartimento di Elettronica, Informazione e Bioingegneria, Politecnico di Milano (Italy), 2015.
- Lectures on “Audio techniques for Virtual Reality” for the course “Virtual Reality”, Prof. Alberto Borghese, Università degli Studi di Milano (Italy), years 2016/17, 2017/2018, 2018/2019, 6h.
- Presentation of the project “MoveCare - Multiple-Actors Virtual Empathic Caregiver for the Elder” at the course of “Startup and innovation”, Prof. Benassi, Università degli Studi di Milano (Italy), 2019.

## Teaching activity

### 2019-2020

Sistemi Intelligenti Avanzati - Prof. Alberto Borghese (*teaching assistant*) - Computer Science - Università degli Studi di Milano - Graduate level - seminar on Introduction to Autonomous Mobile Robotics (8h)  
Years: 2019/2020.

### 2018-2019

Fondamenti Di Informatica - Prof. Cristiana Bolchini (*teaching assistant - assistente alla didattica - esercitazioni*) - Computer Engineering - Politecnico di Milano - Undergraduate level. (20h)  
Years: 2018/2019.

### 2016-2019

Realtà Virtuale - Prof. Alberto Borghese (*teaching assistant*) - Computer Science - Università degli Studi di Milano - Graduate level - seminar on Audio techniques for Virtual Reality (4h)  
Years: 2016/2017, 2017/2018, 2018/2019.

### 2017-2018

Winter School on Industry 4.0: How the fourth industrial revolution will change the manufacturing environment - Prof. Marco Taish (*teaching assistant*) - Alta Scuola Politecnica (ASP), Politecnico di Torino and Politecnico di Milano - Higher education graduate level. (30h)  
Year: 2017-2018.

### 2014-2018

Fondamenti Di Informatica - Prof. Cristiana Bolchini (*teaching assistant - responsabile di laboratorio*) - Computer Engineering - Politecnico di Milano - Undergraduate level. (18/20h)  
Years: 2014/2015, 2015/2016, 2016/2017, 2017/2018.

### 2013-2017

Informatica B - Prof. Vittorio Zaccaria (*teaching assistant - responsabile di laboratorio*) - Mechanical and Energy Engineering - Politecnico di Milano - Undergraduate level. (18/20h)  
Years: 2013/2014, 2014/2015, 2015/2016, 2016/2017.

### 2012-2013

Informatica B (*lab. tutor - tutor di laboratorio*) - Mechanical and Energy Engineering - Politecnico di Milano - Undergraduate level. (150h)  
Year: 2012/2013.

## STUDENTS’ SUPERVISION

### Graduate Students Supervision/Co-Advisor

- *Leone D’Emilio* 2014, “Un modello generative spettrale basato su grafi per il mapping semantico di edifici”, M.Sc. in Computer Science and Engineering, Politecnico di Milano (Italy)
- *Michele Launi* 2015, “Reasoning on the whole structure of buildings using a Logical Relational Learning Framework”, M.Sc. in Computer Science and Engineering, Politecnico di Milano (Italy)
- *Mattia Di Vitto, Modestino Cucciniello* 2015, “Modellazione e predizione di mappe semantiche di edifici tramite graph kernel e tecniche Monte Carlo Markov-Chain”, M.Sc. in Computer Science and Engineering, Politecnico di Milano (Italy)
- *Matteo Calabrese* 2016, “Costruzione di Mappe Multilivello per Robot Mobili Autonomi”, M.Sc. in Computer Science and Engineering, Politecnico di Milano (Italy)
- *Valerio Arcerito* 2017, “Modellazione e predizione della struttura di ambienti indoor per la robotica mobile a partire da una mappa parzialmente esplorata”, M.Sc. in Computer Science and Engineering, Politecnico di Milano (Italy)

- *David Lorenzi* 2017, “The influence of starting position in single-robot exploration performances”, M.Sc. in Computer Science and Engineering, Politecnico di Milano (Italy)
- *Matteo Pasina* 2017, “A system for automatically evaluating the quality of maps built by autonomous mobile robots”, M.Sc. in Computer Science and Engineering, Politecnico di Milano (Italy)
- *Danilo Fusi* 2018, “Speeding up single-robot exploration performances using a-priori knowledge from blueprints”, M.Sc. in Computer Science and Engineering, Politecnico di Milano (Italy)
- *Valerio Castelli* 2018, “Prediction of the map quality obtained from 2D SLAM”, M.Sc. in Computer Science and Engineering, Politecnico di Milano (Italy)
- *Nicola Sturari* 2019, “Dal Grafo alla Planimetria: generazione procedurale di planimetrie di ambienti indoor”, M.Sc. in Computer Science and Engineering, Politecnico di Milano (Italy)
- *Luca Fochetta* 2019, “Use of Predicted Layout of Indoor Environments in Exploration Strategies for Autonomous Mobile Robotics”, M.Sc. in Computer Science and Engineering, Politecnico di Milano (Italy)
- *Lin Chang, Li Mingju* 2019, “A data-driven approach for early stopping in autonomous robot exploration based on convolutional neural networks”, M.Sc. in Computer Science and Engineering, Politecnico di Milano (Italy)
- *Stefano Carideo* 2019, “Procedural generation of realistic building layouts from graphs”, M.Sc. in Computer Science and Engineering, Politecnico di Milano (Italy)

Currently Co-Advisor of 5 M.Sc thesis at Università degli Studi di Milano (Italy) and Politecnico di Milano (Italy).

## CONTRIBUTIONS UNDER REVIEW AND PREPRINTS

### Contributions under review in refereed international journals

- Matteo Luperto, Francesco Amigoni, *Reconstructing the Structure of Buildings from Partial 2D Metric Maps*, under review at Robotics and Autonomous Systems (conditionally accepted) - extended version of [IC.4] - invited contribution.
- Francesca Lunardini, Matteo Luperto, Simona Ferrante, Nicola Basilico, Alberto Borghese, Katia Daniele, Carlo Abbate, Sarah Damanti, Daniela Mari, Matteo Cesari, *Supervised digital neuropsychological tests for cognitive decline in elderly*, under review at Journal of Medical Internet Research - JMIR - extended version of [IC.7].
- Matteo Luperto, Michele Antonazzi, Alberto Borghese, Francesco Amigoni, *Indoor Robot Exploration Using Inaccurate Prior Knowledge*, under review at Robotics and Autonomous Systems - extended version of [IC.3] - invited contribution.

### Contributions under review in refereed international conferences

- Matteo Luperto, Francesco Amigoni, *Exploration of Indoor Environments Predicting the Layout of Partially Observed Rooms*, under review at the IEEE Conference on Robotics and Automation (ICRA 2020).
- Francesco Amigoni, Davide Azzalini, Alberto Castellini, Alessandro Farinelli, Matteo Luperto, *HMMs for Anomaly Detection in Autonomous Robots*, under review at the International Conference on Autonomous Agents and Multiagent Systems (AAMAS 2020).

### Contributions in preparation - preprints

- Nicola Basilico, N. Alberto Borghese, Jacopo Essenziale, Matteo Luperto, Renato Mainetti, Alessandro Vuono, *A Web-Based Social Infrastructure for Promoting Active Ageing of Elders*, to be submitted to the IEEE Transactions on Emerging Topics in Computing (expected submission date January 2020).
- Francesco Amigoni, Fabio Bonsignorio, Matteo Luperto, *Predicting Performance of SLAM Algorithms*, to be submitted to the IEEE Transactions on Robotics (expected submission date January 2020) - extended version of [IC.8].
- Matteo Luperto, Javier Monroy, J. Raul Ruiz-Sarmiento, Francisco Angel Moreno, Nicola Basilico, Jennifer Renoux, Andrej Krpic, Marios Milis, Javier Gonzalez-Jimenez, N. Alberto Borghese, *At-home Autonomous Robot for Ambient Assisted Living for the Elders*, to be submitted to Robotics and Autonomous Systems (expected submission date February 2020).
- Matteo Luperto, Javier Monroy, Marta Romeo, J. Raul Ruiz-Sarmiento, Francisco Angel Moreno, Nicola Basilico, Javier Gonzalez-Jimenez, N. Alberto Borghese, *A Web-Based Telepresence System for At-Home Emergency Assistance of Elders*, to be submitted to the “IEEE/RSJ International Conference on Intelligent Robots and Systems (IROS 2020) (expected submission March 2020).
- Matteo Luperto, Francesco Amigoni, *A data-driven approach for early stopping in autonomous robot exploration based on CNNs*, to be submitted to the “IEEE/RSJ International Conference on Intelligent Robots and Systems (IROS 2020) (expected submission March 2020).

# Research interests

## 1 Reasoning about the structure of buildings for autonomous mobile robotics

Autonomous mobile robots can perform many different tasks to help humans during their activities or to replace them in hazardous environments and simple routine operations. When we consider indoor tasks, robots have to interact with environments that are specifically designed for human activities, buildings.

Buildings are strongly structured environments that are organized in regular patterns. For instance, rooms typically have a geometrical structure that is characterized by features, such as walls perpendicular to the floor and to the ceiling, and by a layout that can be, in most cases, approximated by a box-like model.

In order to increase their ability to autonomously operate in indoor environments, robots must have a good understanding of buildings, in a way similar to the one that human beings exploit during their everyday activities. If we consider how people and robots interact with indoor environments, it can be said that people naturally understand and “read” buildings as human-made environments (and act in them accordingly) and that this is hardly the case for autonomous mobile robots.

Typically, the interaction between a robot and its environment is heavily based on data acquired with perception. Such data are used for constructing *metric* and *semantic maps* of the environment, where the former are used to represent the occupancy and the free space perceived by the robot, and the latter are abstract representations built on top of metric maps that aim to represent the meaning of parts of the perceived environment in order to provide robots a human-like understanding of their surroundings. Mapping methods usually provide reliable knowledge only on parts of the environment that have been already visited. This approach often implies that what has not been seen by the robot does not exist, adopting, in a sense, a closed world assumption on the environment. This form of interaction with the environment is radically different from that of humans, who can easily navigate and comprehend the structure of buildings even without having seen them before.

Our main research interest moves from the consideration that the global structure of buildings could be exploited to increase the autonomous abilities of robots when operating in indoor environments [IC.3]. Our proposed framework aims at identifying and at overcoming the limitations in standard mapping methods by starting from two insights on indoor environments. At first, we consider an entire floor of a building as a single object, by identifying relations between different (and potentially unconnected) parts of the building, such as walls, which can be used to infer the possible structure of unobserved parts of the building, as unexplored rooms behind closed doors [IC.8],[IC.4],[IC.9] [IC.3]. Moreover, we consider each building in relation to other buildings with the same function [JR.1]. The function of a building is represented by the main activity that each building is designed for (e.g., an office, a school) and is captured by the concept of *building type* [IC.16]. The function of a building imposes its structure, its floor plan, and the structure of its rooms. This allows us to exploit the fact that each building, having a precise function, shares some structural features with all other buildings with the same purpose [IC.12].

## 2 Assistive and collaborative autonomous mobile robotics

One of the long-term applications of autonomous mobile robots is to provide assistance during the execution of daily activities, both at home and in the workplace. The tasks that could already be performed by autonomous mobile robots are numerous, such as providing guidance and instructions in large scale environment as museums or hospitals, providing stimulations and support to elders living at home, or function as collaborative robots (cobots) in an office environment. However, the long-term deployment of an autonomous robotic platform in a real-world scenario presents several issues [IC.2] dealing both with core abilities of the robot, as mapping and localization [IC.3], [IC.8], and with advanced functionalities such as human-robot interaction [IC.10] [IC.1] [IC.1], task planning, and autonomous decision making. Moreover, the interaction of a robotic platform with IoT-based smart environments could increase the set of the possible application of robotic platforms [IC.2] [WS.2]. Up to now, a proper methodology for testing and assessing the correct long-term and large-scale functioning of such robots is still largely missing [JR.2]. Our research aims to address several of the current limitations of assistive and collaborative autonomous mobile robots, by analysing and evaluating the robot performances in new and different environments [IC.2] [IC.8] [JR.2], and by developing functionalities for assistive robots [WS.2] [IC.2] [IC.1].
