## AWARDS, ACKNOWLEDGEMENTS, SCHOLARSHIPS

Year	Description of award
2016-2017	Junior Research Fellowship from Department of Atomic Energy - Board of Research in Nuclear Sciences (DAE-BRNS) on project "Study of neutron induced reaction cross sections up to 18 MeV for advanced reactor design", grant sanction number 36(6)/14/22/2016-BRNS/36022
2018-2020	Senior Research Fellowship from DAE-BRNS on the project "Study of neutron induced reaction cross sections up to 18 MeV for advanced reactor design", grant sanction number 36(6)/14/22/2016-BRNS/36022.

## TRAINING OR RESEARCH ACTIVITY

description of activity
<p>As a former postdoctoral fellow at the Department of Physics, Faculty of Science, University of Zagreb, Croatia, I worked on the "Single Layer Gamma-Ray Polarimeter for Medical Imaging Applications and Fundamental Physics Research (SiLGaP)" project from 4th March 2021 till 17th October 2023. The project involves investigating and measuring polarization correlations and the entangled nature of the gamma rays generated in a positron annihilation. My research work in SiLGaP project was primarily focused on the detector development for the measurement of azimuthal correlations of annihilation gammas from positron annihilation using Compton scattering. I am well trained utilizing finely segmented scintillator crystals, such as GaGG and/or LYSO with silicon photomultiplier (SiPM) readouts. The detectors were used to develop a PET demonstrator to test the implementation of gamma polarization correlation into the image reconstruction and to see its effects on the signal-to-background (S/B) and signal-to-noise (SNR) ratio. I have research interests in detector development for applications in nuclear/particle physics, development of PET and/or Compton Cameras. I also have extensive experience with experiments to measure the production cross-sections of different medical isotopes like <math>^{99m}\text{Mo}</math>, <math>^{99m}\text{Tc}</math>, <math>^{58}\text{Co}</math>, etc. using various reaction channels with neutron, proton, and heavy-ion beams. I am proficient in programming with C++, data analysis, and post-processing with the ROOT analysis framework, performing simulations using GEANT4, and have a good knowledge of particle interactions. I have worked with multiple read-out systems and can easily adapt to newly developed systems. I also have initial training in image reconstruction using different algorithms. I have hand-on experience working with gamma, neutron, and charged particle beams generated using different accelerators for isotope production, nuclear reaction cross-section, and other measurements for various applications.</p>
