## Competenze professionali

Nel periodo di attività come Funzionario Tecnico nel Dipartimento di Chirurgia Generale e Vascolare dell'Università di Brescia il Dott. Muiesan ha collaborato in progetti scientifici studiando le modificazioni delle resistenze a livello delle arteriole in pazienti con ipertensione essenziale utilizzando tecniche di micromiografia.

Durante l'esperienza nel Dipartimento di Chirurgia Generale e Vascolare ha dimostrato interesse per la chirurgia del fegato, in seguito al quale è stato accettato come Honorary Registrar al King's College Hospital (London, UK) per la formazione nel Trapianto di Fegato. Ha iniziato eseguendo prelievi multi-organo e trapianti di fegato dal 1993, completando 170 prelievi multi-organo nei primi 2 anni. Nel proseguimento della sua carriera in UK ha proseguito la propria formazione ottenendo l'incarico di Senior Registrar nella Liver Unit presso il King's College Hospital.

È stato nominato Consultant Surgeon nel 1998. Ha lavorato in turni 1:3 nel servizio di trapianto di fegato e nella chirurgia epato-biliare ed ha assicurato turni di guardia, servizio ambulatoriale e assistenza di reparto di pazienti sottoposti a trapianto di fegato per un volume di circa 190 trapianti /anno, dei quali, circa 40 in pazienti pediatrici.

Ad oggi ha effettuato 977 trapianti di fegato come primo operatore, di cui 804 in adulti e 173 in bambini, ha inoltre introdotto il programma di trapianto epatico da donatore vivente a Birmingham sia in pazienti pediatrici che adulti. Nel contesto del trapianto da donatore vivente ha collaborato allo sviluppo di trapianti in India (Hyderabad), Pakistan (Karachi ed Islamabad) e nella repubblica Ceca (Praga). Ha eseguito 150 procedure split sia in situ che su banco e, di queste, 7 per adulti (full right full left split). Ha inoltre eseguito 19 trapianti di fegato ausiliari nel contesto di episodi di insufficienza epatica acuta e di malattie metaboliche al King's College Hospital ed ha introdotto la tecnica al Queen Elizabeth ed al Children's Hospitals a Birmingham. Si è formato nel trapianto di intestino e nel trapianto multiviscerale ad Omaha, Nebraska ed a London, Ontario e, ad oggi ha eseguito 14 trapianti di piccolo intestino e trapianti multiviscerali presso il Birmingham Children's Hospital.

Il Prof. Muiesan ha diretto lo sviluppo del primo programma di trapianto di fegato da donatori per morte cardiocircolatoria (DCD) nel Regno Unito durante il suo lavoro presso il King's College Hospital. I risultati iniziali hanno fornito la base su cui è stato introdotto il trapianto di fegato da DCD negli altri centri a livello nazionale [Muiesan P., Girlanda R., Jassem W., Melendez H.V., O'Grady J., Bowles M., Rela M., Heaton N. Single-center experience with liver transplantation from controlled non-heartbeating donors: a viable source of grafts. Ann Surg. 2005;242(5):732-8].

Ha inoltre sviluppato il programma di trapianto di fegato da DCD attualmente attivo presso il Queen Elizabeth Hospital Birmingham introducendo anche il nuovo servizio di perfusione normotermica regionale (NRP) con ECMO, utilizzato per migliorare la perfusione e la preservazione degli organi addominali provenienti da DCD. Ha organizzato il secondo "National UK Meeting on Normothermic Regional Perfusion using ECMO in organ donors", ed ha avviato e organizzato 8 edizioni dell'"International Meeting on Transplantation of Organs from DCD", delle quali 5 in UK, e 3 rispettivamente a Parigi, Barcellona ed a Milano.

Collabora in Trials multicentrici su preservazione degli organi per trapianto con macchine extracorporee ipotermiche e normotermiche ed in gruppi di studio internazionali che studiano i risultati di trapianto epatico da DCD in Europa e nel mondo. In particolare, è quasi completo il nuovo progetto sul *benchmark* dei trapianti DCD in seguito ad altre collaborazioni in diversi studi *benchmark* sul trapianto da donatore DBD e su resezioni pancreatiche, standard e con resezioni vascolari.

Parallelamente all'esperienza nel trapianto ha contribuito allo sviluppo di tecniche chirurgia epato-biliopancreatica eseguendo principalmente resezioni epatiche, sia in chirurgia a cielo aperto che mininvasiva (laparoscopica e robotica), per patologia metastatica, carcinoma epatocellulare e colangiocarcinoma. Ha sviluppato il servizio clinico per il trattamento del carcinoma epatocellulare presso il King's College Hospital, che ha comportato l'apertura di un nuovo reparto di degenza cui fanno riferimento una media di 300 nuovi casi/anno. Ha introdotto per primo al Queen Elizabeth Hospital a Birmingham tecniche di chirurgia epato-pancreato-biliare complessa, quali la epatectomia in due tempi con la tecnica ALPPS, la resezione epatica *ex-vivo* con sostituzione

cavale ed autotrapianto epatico e la resezione *ante-situm* con bypass veno-venoso e perfusione ipotermica del fegato. È inoltre coinvolto nella pratica chirurgica di patologie oncologiche del pancreas come la procedura di Whipple, la pancreatectomia distale e totale, in particolare con resezioni vascolari dell'asse portale e nelle procedure di drenaggio del dotto pancreatico nelle pancreatiti croniche. Ha introdotto a Birmingham la resezione del tronco celiaco per tumori pancreatici (Appleby procedure). Effettua interventi di chirurgia nei traumi epatici complessi e nelle complicazioni iatrogene di colecistectomie laparoscopiche.
