

ANNEX B

UNIVERSITY OF MILAN

Public selection for recruiting No._1_ research fellow(s) under art.24, paragraph 3.b, of Law No.240/2010 for competition sector 05/G1 - Pharmacology, Clinical Pharmacology And Pharmacognosy, (scientific-disciplinary sector BIO/14 - Pharmacology) at the Department of **PHARMACOLOGICAL AND BIOMOLECULAR SCIENCES**, (announcement published in Official Gazette No. 59 of 26 July 2022) - Competition code 5073

[ALICIA RUBIO GARRIDO]

CURRICULUM VITAE

PERSONAL DATA (DO NOT INCLUDE YOUR PERSONAL ADDRESS AND LANDLINE OR MOBILE PHONE NUMBER)

SURNAME	RUBIO GARRIDO
NAME	ALICIA
DATE OF BIRTH	28, AUGUST, 1980

QUALIFICATIONS

DEGREE

Degree in Biologia (01/09/2003)

Universidad de Valencia, Spain

Extraordinary Award (Best final grade in Faculty of Biology, 3,187/4, University de Valencia)

(ATTACHMENT ATT. 1, 3)

DOCTORAL DEGREE

PhD in Molecular Biology (26/11/2008, Excellent “Cum laude”)

Universidad Autónoma de Madrid

Title « Implications of tau protein and cortistatin in the progression of Alzheimer disease »
Directed by Jesús Avila and Mar Pérez

(ATT. 2, 3)

RESEARCH CONTRACTS, POSTDOCTORAL AND PREDOCTORAL SCHOLARSHIPS

2014-present POSTDOCTORAL RESEARCHER
Istituto di Neuroscience CNR/ Ospedale San Raffaele (Milano, Italy)

Contracts :

- 01/01/2018-present Assegni di ricerca in CNR (IN MI 04/2017, IN-005-2020-MI, IN-10-MI-2021, IN-003-2022-MI) (ATT.4)

In this period I had two children and I took up around 18 months of maternity leave

From 08/10/2018 -27/06/2019 and from 02/07/2019 to 01/09/2019

From 29/07/2021 to 09/01/2022 and From 14/01/2022 to 29/05/2022

- 01/01/16-31/12/16 Lavoro a tempo determinato in Ospedale San Raffaele (ATT.5)
- 01/06/2014-31/12/15 and 01/01/17- 31/12/2017 Collaborazione coordinate e continuative in Ospedale San Raffaele (ATT.6)

2012-2014

POSTDOCTORAL RESEARCHER

European Institute of Oncology (IEO, Milano) and Universidad de Valencia (Valencia, Spain)

Contracts :

- 02/01/14-31/05/14 Borsa di studio IEO (ATT.7)
- 01/01/10-31/12/13 Postdoctoral contract from public spanish institute Instituto de Salud Carlos III to investigate for 4 years « Ayuda post-doctoral de perfeccionamiento en investigación en salud Sara Borrell »

I was selected by open public competition (concorso pubblico) and I worked in Universidad de Valencia (2010-2011) and then in IEO (2012-2013) (ATT.8)

2004-2009

PhD STUDENT

Centro de Biología Molecular Severo Ochoa CBMSO/ Universidad Autónoma de Madrid UAM (Madrid, Spain)

Contracts:

- 01/01/08-31/12/09 Post and pre-doctoral contract in CBMSO funded by a public spanish institute CIBERNED and selected by open public competition (concorso pubblico) (ATT.9)
- 01/01/04-31/12/07 Predoctoral contract in CBMSO/UAM funded by Spanish Ministry of Education, Culture and Sport

I was selected by open public competition (concorso pubblico called “Formación de profesorado universitario FPU”) to work on my PhD Project (ATT.10)

01/09/04-31/08/07 Fellowship for PhD students funded by Ayuntamiento de Madrid to stay in Residencia de Estudiantes (ATT.11)

2002-2003

Undergraduate

Universidad de Valencia (Valencia, Spain)

Scholarships «Borse di studio » (won by open public competition):

- 01/09/03-31/12/03 Scholarship to collaborate in a research lab of CBMSO funded by CSIC

“Beca de Introducción a la Investigación del CSIC para estudiantes de último curso” (ATT.12)

- 01/09/02-31/08/03 Scholarship to collaborate in a research lab of the Universidad de Valencia (Cellular Biology Department) funded by Spanish Ministry of Education, Culture and Sport

“Beca de colaboración” (ATT.13)

- 15/07/02-14/09/02 Scholarship to collaborate in a research lab of Instituto de Salud Carlos III

“Beca para estudiantes universitarios Ayuda del programa de investigación y formación intramural del Instituto de Salud Carlos III” (ATT.14)

TEACHING ACTIVITIES

2010-2013 Teaching activities in Cell Biology Department (University of Valencia, 240 hours) (ATT.15)

Courses taught:

1. Cytology and Animal and Vegetal Histology 28 hours
2. Cell Biology 16 hours
3. Microscopic Techniques 32 hours
4. Intracellular Dynamic and Signaling 16 hours
5. Generation of Transgenic Organisms 6 hours
6. Cell Structure 40 hours
7. Cell Biology and Tissue 22 hours
8. Techniques of Cell analysis 20 hours
9. Cell Structure 32 hours

2009 Teaching activities in Molecular Biology Department (Autonomous University of Madrid, 40 hours, Degree in Biochemistry) (ATT.15)

Courses taught:

10. Experimental Biochemistry I 40 hours

Supervision of a Thesis (ATT.16)

Degree in Biotechnology and Medical Biology untitled “iPS cell modelling of different genetic forms of Prader-Willi syndrome” by Tommaso Pezzica from Università Vita-Salute San Raffaele (2022). Relatore Bianchi M, Correlatore Rubio A, Broccoli V.

RESEARCH ACTIVITIES

2014-present	POSTDOCTORAL RESEARCHER
Istituto di Neuroscience CNR/ Ospedale San Raffaele (Milano, Italy)	
<ul style="list-style-type: none">• Dr. Broccoli's laboratory in Stem Cells and Neurogenesis Unit• Research topic: differentiation of induced Pluripotent Stem Cells (iPSCs) into neurons, disease modeling using human neuronal cultures (from patients and modified by CRISPR/Cas9), infection with Zika virus	
2012-2014	POSTDOCTORAL RESEARCHER
European Institute of Oncology (IEO, Milano)	
Dr. Pece's laboratory at Dr. di Fiore's group	
<ul style="list-style-type: none">• Research topic: regulation of stem cells self-renewal and implication in cancer• Collaboration with MD. Felisati (San Paolo Hospital) to isolate and characterize in vivo and in vitro the adult stem cells present in biopsies of human olfactory mucosa	
2010-2011	POSTDOCTORAL RESEARCHER
Universidad de Valencia (Valencia, Spain)	
<ul style="list-style-type: none">• Dr. Fariñas's laboratory in Molecular Neurobiology Unit• Research topic: division mode in murine neural stem cells from adult subependimal zone and enrichment of stem cells• Collaboration with Dr. Nacher to study the nature, origin and potential function of the immature neurons in the adult piriform cortex of mice.	
2004-2009	PhD STUDENT
Centro de Biología Molecular Severo Ochoa CBMSO/ Universidad Autónoma de Madrid UAM (Madrid, Spain)	
<ul style="list-style-type: none">• Dr. Avila's laboratory in Molecular Neurobiology Department• Research topic: Alzheimer disease. Tau protein toxicity in primary neurons and in transgenic mice. Epigenetic control of cortistatin expression by b amyloid peptide	
PhD student Internships	
<ul style="list-style-type: none">• Sep-Dec 2006/Nov 2005-Jan 2006 Narcolepsy Center, Stanford University/ The Scripps Research Institute Dr. Lecea's group	
Research topic: somatostatin/cortistatin receptors and its internalization in neurons	
<ul style="list-style-type: none">• Feb-Mar 2006 School of Medicine, Universidad de Cadiz Dr. Moreno's group	
Research topic: electrophysiology in a transgenic mouse model of Alzheimer disease	

- Sep-Dec 2003 CBMSO Dr. Lucas's group

Research topic: characterization of a conditional transgenic mouse model of Huntington disease

Undergraduate

- Oct 2002- Jun 2003 Universidad de Valencia. Dr. Fariñas's laboratory
- Jul 2002- Sep 2002 Instituto de Salud Carlos III (Madrid) Dr. Najera's group

RESEARCH PROJECTS

As principal investigator with budget (2 projects) (ATT. 17)

- 1. Prader-Willi syndrome: modelling, epigenetic therapies and immunological dysfunctions (GR-2019-12371442)

Finalizzata GR, Ministero della Salute, 2022-2025

Role: Principal Investigator of the Project (Budget of the Unit 300.000,00Euro, Total Budget 450.000,00Euro)

- 2. Mitochondrial inborn errors of Coenzyme A biosynthesis-associated neurodegeneration: implementation of new disease models and evaluation of Coenzyme A supplementation as potential therapeutic approach GR-2018-12365610

Finalizzata GR, Ministero della Salute, 2020-2024

Principal Investigator of the Project: Ivano di Meo (Besta Institute)

Role: Principal Investigator of one research unit (Budget of the Unit 88.560,00Euro, Total Budget 446.830,00Euro)

As a member of the team (9 projects) (ATT. 18)

- 1. Biological basis for Zika virus-induced severe complications: impact on prevention strategies RF-2016-02364155 Finalizzata, Ministero della Salute, Italy 2018-21 Principal investigator: Maria Rosaria Capobianchi
- 2. RETIC de Terapia Celular. RD12/0019/0008 Ministerio de Sanidad y Consumo, Spain (Programa RETICS 2012). Programa de Investigación Cooperativa. 2013-2016 Principal investigator: Isabel Fariñas
- 3. CIBER en Enfermedades Neurodegenerativas (CIBERNED) CB06/05/0086 Ministerio de Sanidad y Consumo Spain. Programa de Investigación Cooperativa 2006-2015 Principal investigator: Isabel Fariñas
- 4. Dinámica celular y auto-renovación en poblaciones de células madre del cerebro adulto SAF2011-23331 MICINN, Programa Nacional de Biomedicina Spain 2012-2014 Principal investigator: Isabel Fariñas
- 5. Efectos del microambiente vascular en las células madre del cerebro adulto (PROMETEOII/2013/020) Consellería de Educación de la Generalitat Valenciana Spain. Programa Prometeo de Proyectos de Excelencia 2013-2017 Principal investigator: Isabel Fariñas

- 6. Investigación en red de las enfermedades neurodegenerativas CB06/05/0035 CIBER 2006-2009 Principal investigator: Jesús Ávila
- 7. Mecanismos moleculares de la neurodegeneración. Modelos celulares y animales SAL/0202/2006 CAM Spain 2006-2009 Principal investigator: Jesús Ávila
- 8. Modelos para el estudio de algunos tipos de degeneración y regeneración neuronal SAF2008/02424 MICINN Spain 2006-2011 Principal investigator: Jesús Ávila
- 9. Patología molecular en la Enfermedad de Alzheimer. Neuroinflamación y factores neurotróficos PRY-07-401 CIBERNED Spain 2007-2011 Principal investigator: Jesús Ávila

PARTICIPATION IN SCIENTIFIC MEETINGS, CONGRESS AND WORKSHOPS

Scientific Committee and chairperson

First International Meeting “The Century of the Alzheimer Brain Interactome” (Brain Club International) (Slovaquia, 2009) (ATT 19)

Oral presentations

O1. Glycobiology in Infectious Disease - (Keele University, UK - 4/5 September 2017) Vicenzi E, Pagani I, Ottoboni L, Ghezzi S, Rubio A, Skidmore M, Broccoli V, Martino G, Yates E “Pharmaceutical heparin improves survival of human neural progenitor cells infected with ZIKA virus”

O2. 3rd European ORL-HNS Congress, (Prague, 8-11 June 2015) Saibene AM, Pipolo C, Molteni M, Tanos T, Rubio Garrido A, Scotti A, Maccari A, Felisati G. “Validation of a high output culture technique for obtaining neural stem cells from human olfactory mucosa” (ATT.20)

O3. 25th ERS congress, (Amsterdam, 22-26 June 2014) Saibene AM, Pece S, Pipolo GC, Tanos T, Rubio A, Maccari A, Scotti A, Felisati G. “Validation of a high output culture technique for obtaining neural stem cells from human olfactory mucosa.” (ATT.20)

O4. International Brain Club (Slovak Republic, 2009). Rubio A. Oral presentation and Chairperson. (ATT 19)

“Progression of tau pathology in Alzheimer Disease”

O5. XII International Symposium on cholinergic mechanisms (Alicante, 2005). Rubio A. Oral presentation (ATT.21)

“The role of the cholinergic system in Alzheimer disease”

Posters

P1. Alberti S, Rubio A, Pezzica T, Bellini E, Zaghi M, Nannoni M, Gambare D, Marzi M, Nicassio F, Baroncelli L, Tonazzini I, Broccoli V “Multiome technology to explore the role of nuclear UBE3a in Angelman syndrome” (CNR Retreat, Cagliari, 22-24 september 2022) (ATT. 22)

P2. Levi S, Santambrogio P, Ripamonti M, Cozzi A, Rubio A, Taverna S, Di Meo I, Cavestro C, Tiranti V “PKAN stem cell derived neurons and astrocytes show massive iron accumulation mimicking the human phenotype” (7th International Myology Congress and mitoNice , Nice,12-17 September 2022) (ATT.23)

P3. Levi S, Santambrogio P, Ripamonti M, Cozzi A, Rubio A, Taverna S, Di Meo I, Cavestro C, Tiranti V “PKAN stem cell derived neurons and astrocytes show massive iron accumulation mimicking the human phenotype” (OSR Retreat, Baveno, March 2022) (ATT.24)

- P4. Pagani I, Ghezzi S, Ulisse A, Rubio A, Turrini F, Garavaglia E, Castilletti C, Ippolito G, Poli G, Broccoli V, Panina-Bordignon P, Vicenzi E "Zika virus infection of human endometrial stromal cells: progesterone upregulation of virus replication and AXL cell surface expression" (OSR Scientific Retreat - Congress Hotel Dino, Baveno, Italy, 10/12-03-2017)
- P5. Rubio A, et al. "Rapid and efficient CRISPR/Cas9 gene inactivation in human neurons during human pluripotent stem cell differentiation and direct reprogramming" (European Society for Gene and Cell Therapy, Florence, 2016) (ATT. 25)
- P6. Vicenzi E, Rubio A, Pagani I, Ghezzi S, Turrini F, Capobianchi M, Iannielli A, Broccoli V "Zika Virus (ZIKV) Infection of Human Neural Progenitor Cells and Skin Fibroblasts" (National Symposium on Zoonoses Research, Berlin, Germany, 2016)
- P7. Rubio A, et al. "Generating CRISPR/Cas9 mutant human iPSCs for modelling NBIA" (CNR Retreat, Pisa, 2015)
- P8. Rubio A, et al. "Generation of functional forebrain GABAergic interneurons from hIPSCs in vitro differentiation" (MMN, Milano, 2015) (ATT.26)
- P9. Saibene AM, Pipolo C, Felisati G., Castelnuovo P, Bignami M, Tanos T, Rubio A "Esthesioneuroblastoma: coltura in vitro e formazione di sferoidi da lesioni primitive.[Olfactory neuroblastoma: in vitro culture and spheroid formation from primitive lesions]" (102nd SIO National Congress, Rome, 27-30 May 2015) (ATT. 27)
- P10. Saibene AM, Pipolo C, Tanos T, Rubio A, Bignami M, Castelnuovo P, Felisati G. "Human esthesioneuroblastoma: in vitro colture from primitive lesions and spheroid formation". (3rd European ORL-HNS Congress, Prague, 8-11 June 2015.) (ATT. 28)
- P11. Saibene AM, Pece S, Pipolo GC, Tanos T, Rubio A, Bignami M, Castelnuovo P, Felisati G. "Human esthesioneuroblastoma: in vitro colture from primitive lesions and spheroid formation." (25th ERS congress, Amsterdam, 22-26 June 2014) (ATT.29)
- P12. Rubio A, et al. "p53 controls the mode of division in adult neural stem cells" (FENS, Milano, 2014). (ATT. 30)
- P13. Rubio A, et al. "Tau protein interaction with M1 and M3 muscarinic receptors" (ICAD, Vienna, 2009). (ATT.31)
- P14. Cantero JL, Rubio A, et al. "Effects of tau protein on neocortical and hippocampal oscillatory patterns" (CIBERNED, Valencia, 2008).
- P15. Rubio A, et al. "Effect of acetylcholine and cortistatin on tau phosphorylation at Ser262 site" (ICAD, Madrid, 2006). (ATT.32)
- P16. Rubio A, et al. "Effect of acetylcholine and cortistatin on tau phosphorylation at Ser262 site" (ASCB, San Francisco, 2005). (ATT.33)
- Workshops and Congress (ATT.34)
1. Joint EIC-ERC workshop on Gene and Cell Therapy (online, 2021)
 2. FENS Forum of Neuroscience (Berlin, 2018)
 3. Meeting RedBrain (Geneve, 2017)
 4. Annual Meeting of Cellular Therapy Network Tercel (Madrid, 2010)

- 5. New Therapies based on the transplantation and genetic manipulation of Stem Cells (CIEMAT, Madrid, 2009)
- 6. Neurobiological Basics about sleep (Madrid, 2005)
- 7. Models to study biological processes and their pathologies (Santander, 2004)

AWARDS

- 1. Sara Borrell Instituto de Salud Carlos III - Postdoctoral Contract (2010-2013) (ATT.8)
- 2. CIBERNED - PhD studentship and contract (2008-2009) (ATT.9)
- 3. CSIC studentship in the Residencia de Estudiantes (2004-2007) (ATT.11)
- 4. Spanish Ministry of Education and Science - PhD studentship (2004-2007) (ATT.10)
- 5. CSIC - Studentship (2003) (ATT.12)
- 6. Spanish Ministry of Education Undergraduate - studentship (2002-2003) (ATT.13)
- 7. Instituto de Salud Carlos III - Summer Fellowship (2002) (ATT.14)

ADDITIONAL EXPERIENCE

1. Member of a PhD committee. PhD untitled "Continuous neuronal integration in the cerebral cortex of rodents and humans" by Simona Coviello from Universidad de Valencia supervised by Juan Nácher Roselló y Esther Castillo Gómez (2021) (ATT.35)
2. Reviewer of scientific journals Scientific Reports (IF 4,996), Cell Death and Disease (IF 6,3), Regenerative Medicine (IF 7,021)
3. Teaching qualification to become a profesor in Spanish University public and private (Abilitazione all'insegnamento, ANECA) (ATT.36)
4. Qualification to work with experimental animals for research purposes ("Homologación de tipo B del Ministerio de Agricultura, Pesca y Alimentación para el manejo de animales de experimentación") (ATT.37)

LANGUAGES

1. English: B1 Certificate from Official School of Languages.
2. French: B2 Certificate from Official School of Languages.
3. Italian: C1 CILS
4. Spanish: Native language.
5. Catalan: C1 Junta Qualificadora de Coneixements de Valencià (ATT.38)

TECHNICAL SKILLS

1. Human iPS cells cultures (reprogramming to generate iPS from blood and fibroblasts and iPS maintenance) and neuronal differentiation into cortical neurons (excitatory and inhibitory) and striatal neurons. Generation of cerebral organoids
2. Cell cultures of eukaryotic cell lines, transfection, infection, viability assays

3. Primary cultures of cortical and hippocampal murine neurons and astrocytes, direct and trans-well co-cultures
4. Primary cultures of murine adult Neural Stem Cells, maintenance of neurospheres and differentiation assays
5. Immunohistochemistry and immunocytochemistry (visible and fluorescence)
6. Optical, fluorescent, confocal and time-lapse microscopy. Image analysis (Fiji and Adobe Photoshop)
7. DNA extraction, DNA digestion, transformation, plasmid miniprep and maxiprep, sequencing, PCR amplification, electrophoresis
8. RNA extraction, RT-PCR, quantitative PCR (SYBR Green, Taqman), sh/iRNA
9. Western Blot, ELISA, enzymatic activity assays, immunoprecipitation assays, internalization assays
10. Wild type and transgenic mice manipulation (Homologation type B from Spanish Ministry of Agriculture), genotyping, IP injection, behaviour test and surgery
11. Mice perfusion, tissue fixation (murine brain and primary human tissues), cerebral dissection and sectioning (cryostat, vibratome, paraffin microtome)
12. Generation of recombinant lentiviruses. Viral infection
13. Flow cytometry FACS

C.F.: RBGLCA80M68Z131A

Le confermiamo – sulla base delle intese, anche transattive, formalizzate con separate accordi di cui la presente lettera forma parte integrante - la Sua assunzione presso il nostro Ospedale, con sede in Milano, alle condizioni normative ed economiche che qui di seguito provvediamo ad elencare.

Inizio
1° gennaio 2016

Tipo di contratto

Rapporto di lavoro a tempo determinato con scadenza al 31 dicembre 2016 (che sarà pertanto l'ultimo giorno di validità del contratto), ai sensi della normativa vigente e in particolare dell'art. 19 del d. lgs. 15 giugno 2015, n. 81.

C.C.N.L. di appartenenza

Il Suo rapporto di lavoro, sia per la parte economica che per quella normativa, viene regolato dal CCNL della Sanità Privata.

Qualifica

Coadiutore di ricerca di categoria "D4".

Periodo di prova

Non previsto.

Procedure, usi e consuetudini

Sarà Suo preciso dovere attenersi alle vigenti procedure, scritte e verbali, alle indicazioni in esse contenute ed alle altre consuetudini in atto presso la nostra azienda e ciò al fine di consentire un'efficiente gestione del lavoro.

Retribuzione di riferimento

La Sua retribuzione totale di riferimento sarà costituita dai seguenti elementi che verranno utilizzati quale base di calcolo per le forme contributive obbligatorie e complementari, per il trattamento di Fine Rapporto ed in caso di contenzioso a seguito di rottura del presente contratto:

- Stipendio base	€ 2.104,04 x 13 mensilità
- EADR	€ 30,99 x 12 mensilità
- Superminimo assorbibile	€ 328,89 x 12 mensilità

RAPPORTO DI COLLABORAZIONE COORDINATA E CONTINUATIVA A PROGETTO

Tra

l'Ospedale San Raffaele srl, con sede in Milano alla via Olgettina n° 60, Codice Fiscale/Partita IVA 07636600962 (di seguito denominato anche Committente)

e la dott.ssa Alicia Rubio Garrido, nata a Valencia (SPAGNA) il 28.08.1980 e residente a Milano in Via Voghera n.º 8, Codice Fiscale RBGLCA80M68Z131A (di seguito denominata anche Collaboratore);

premesso che:

- il Committente ha attivato il progetto di ricerca: "COEN" (Ministero della Salute);
- la dott.ssa Rubio Garrido si è resa disponibile a collaborare a tale progetto;
- la dott.ssa Rubio Garrido, in seguito al conseguimento, presso l'Università di Valencia (SPAGNA), della laurea in Biologia, è in possesso di tutti i titoli professionali ed abilitanze per il compimento del progetto e in particolare di competenze elevate, funzionali all'attivazione dello stesso;
- la dott.ssa Rubio Garrido dichiara di conoscere ed approvare il regolamento interno del Committente, ed assume la piena responsabilità del proprio operato e garantisce la piena efficienza dei servizi resi e la massima correttezza nei rapporti con la Struttura, l'utenza e gli altri operatori, nel rispetto della fisionomia, della natura e del carattere del Committente.

Tutto ciò premesso e considerato parte integrante e sostanziale del presente contratto, le parti stipulano un contratto di lavoro a progetto, ai sensi e per gli effetti della disciplina contenuta negli art. 61 e ss. del decreto legislativo 10 settembre 2003, n. 276, alle seguenti condizioni:

Esclusività della disciplina

Le parti affidano al presente contratto la esclusiva disciplina dei rapporti in essere tra esse e dichiarano esplicitamente che ogni eventuale modifica delle condizioni dettate nel contratto stesso dovrà essere concordata preventivamente.

Oggetto dell'attività

In forza del presente contratto il Collaboratore, nell'ambito del progetto indicato in premessa, si occuperà della riprogrammazione neuronale in vivo per un approccio di medicina rigenerativa nella malattia di Parkinson.

e

la dott.ssa Alicia Rubio Garrido, nata a Valencia (Spagna) il 28.08.1980 e residente in Milano (MI), alla via Argelati n.º 24, Codice Fiscale RBGLCA80M68Z131A (di seguito denominato anche Professionista);

premesso che:

il Committente ha deciso di avvalersi della collaborazione del Professionista in relazione al programma di ricerca: "Repropark" (ERC);

il Professionista si è reso disponibile a svolgere tale attività presso il Committente;

il Professionista dichiara di avere conseguito, presso l'Università Autonoma di Madrid, il Ph.D;

il Professionista dichiara di conoscere ed approvare il regolamento interno del Committente ed assume la piena responsabilità del proprio operato e garantisce la piena efficienza dei servizi resi e la massima correttezza nei rapporti con il Committente, l'utenza e gli altri operatori del Committente, nel rispetto della fisionomia, della natura e del carattere del Committente, secondo i piani di lavoro predisposti per la gestione di servizi di concerto con il Committente;

Tutto ciò premesso e considerato parte integrante e sostanziale del presente contratto, le parti stipulano un contratto di collaborazione coordinata e continuativa, anche ai sensi dell'art. 409 n. 3 c.p.c..

Le Parti si danno atto che esse intendono avvalersi, ai fini della stipulazione e disciplina di questo contratto, dell'Accordo collettivo nazionale (ACNC) del 30 dicembre 2015. Ciò anche a tutti gli effetti di cui all'art. 2, comma 2 lett. a) del d. lgs. 12 giugno 2015, n. 81. L'Accordo Collettivo prevede la consegna di copia dell'Accordo medesimo. Resta esclusa l'applicazione di qualsiasi normativa ARIS, passata, presente o futura, diversa dal solo specifico Accordo appena richiamato. Le condizioni del contratto – anche a specificazione di quelle previste dal citato Accordo - sono le seguenti:

Art.1 - Esclusività della disciplina

Le Parti affidano al presente contratto la esclusiva disciplina dei rapporti in essere tra esse e dichiarano esplicitamente che ogni eventuale modifica delle condizioni dettate nel contratto stesso dovrà essere concordata preventivamente. Le Parti precisano e confermano che il presente rapporto è distinto e diverso rispetto ad ogni precedente eventuale rapporto fra di esse, che si intende estinto e consensualmente risolto e comunque sostituito, anche in via novativa, dal presente contratto.

ATT. 7 BORSA IN IEO

Milano, 27 dicembre 2013
H/13/1394/am

Gentile Sig.a
Dott.ssa ALICIA RUBIO GARRIDO
C/ La Presidenta, 4
46017 VALENCIA SPAGNA

Gentile Dottoressa Rubio Garrido,
siamo lieti di informarla che, nel quadro della nostra adesione volta a sostenere ed incoraggiare le attività di studio e ricerca a carattere scientifico nel campo oncologico, sotto la presidenza del Prof. U. Venetos, la Commissione giudicatrice per la selezione delle Borse di Studio IEO, ha deliberato di assegnarle una borsa di studio annuale, per lo svolgimento del programma di ricerca "Understanding how cancer stem cells drive breast cancer growth and how to exploit this mechanism (Patient stratification: new tools in breast cancer)" nell'ambito del Dipartimento di Oncologia Sperimentale del nostro Istituto.

L'importo annuo onnificante e al lordo delle ritenute di legge, è fissato in € 25.000,00 (euro ventiquattramila) e le sarà corrisposto con pagamenti mensili posticipati.

L'inizio della sua attività presso il nostro Istituto è previsto dal 02 gennaio 2014. Nel periodo di frequenza lei dovrà attenersi alle norme generali che regolano l'attività dell'Istituto.

In relazione ai programmi che concorderà con il Prof. P.P. Di Fiore del Dipartimento di Oncologia Sperimentale, lei è autorizzata a frequentare le sedi del nostro Istituto, a far tempo dalla data sopra indicata, nei giorni e negli orari che il suo referente interno definisce.

L'andamento dell'attività di ricerca da lei esuita nel programma assegnatole, così come l'impegno da lei posto nella sua esecuzione, è soggetto al controllo ed alla irreversibile validazione del suo tutor. Nel caso in cui tale valutazione sia negativa si potrà dar luogo alla risoluzione anticipata della borsa di studio, senza che lei possa vantare alcuna difesa o protesta nei confronti dell'Istituto.

Le precisiamo comunque che, pur in presenza delle indicazioni di cui sopra, l'attività oggetto di questo programma non potrà configurare in alcun modo un rapporto di lavoro, sia subordinato che di altro tipo, tra lei e l'Istituto Europeo di Oncologia. Parimenti al termine del periodo della borsa di studio lei non potrà vantare alcun diritto in ordine ad una sua assunzione presso questo Istituto.

Nel rivolgere il benvenuto e con l'augurio che il suo impegno futuro possa rappresentare un utile apporto per la ricerca oncologica italiana ed europea, la preghiamo di voler ritornare controfirmata per ricezione ed accettazione l'allegata copia della presente.

Con i migliori saluti,

Direzione Risorse Umane
Il Direttore
dott. Daniele Piacentini

Milano, 9 maggio 2014

Dott. Daniele Piacentini
Direzione Risorse Umane
Sede

Egr. Dott. Piacentini,

Io sottoscritta, Alicia Rubio Garrido, percipiente di una Borsa di studio IEO dal 2 gennaio 2014 presso il Dipartimento di Oncologia Sperimentale dell'Istituto Europeo di Oncologia, sotto la supervisione del Prof. Pier Paolo Di Fiore, dichiaro di rinunciare a tale borsa a partire dal 1° giugno 2014.

La ringrazio per la collaborazione.

Cordiali saluti,

Alicia Rubio Garrido

ATT. 8 POST-DOCTORAL CONTRACT SARA BORRELL IN IEO AND UNIVERSIDAD DE VALENCIA

CERTIFICO:

Que de acuerdo con los antecedentes que hay en esta Administración, Alicia Rubio Garrido con DNI 243871685 ha formalizado los siguientes contratos con la Universidad de Valencia:

- Contrato laboral temporal a tiempo completo con una dedicación de 35 h/s como investigadora contratada, adscrita al Departamento de Biología Celular i Parasitología, en el marco del proyecto/programa "Ayudas postdoctorales de perfeccionamiento en investigación en salud "Sara Borrell" dirigido por Isabel Farías Gómez, desde el 01/01/2010 hasta el 31/12/2013.

Y para que conste, a petición de la interesada y a los efectos oportunos expido el presente certificado en Valencia, 14 de enero de 2014.

Jefa de Sección del Servicio de RRHH Pas-Investigación de la UV

Cristóbal Belda Iniesta
Subdirector General de Evaluación y Fomento de la Investigación

CERTIFICA

Que en el marco del Plan Nacional de I+D 2008-2011 y en la modalidad de Contratos Postdoctorales de perfeccionamiento en investigación en salud "Sara Borrell", fue concedida una ayuda con número de Expediente C009/00420 para la contratación de Dña. ALICIA RUBIO GARRIDO, con DNI 243871685. Disfrutó de una estancia de 24 meses en el "INSTITUTO EUROPEO DI ONCOLOGIA" de Milán, bajo la dirección de D. PIER PAOLO DI FIORE. La fecha de inicio de la ayuda fue: 01/01/2010, con una duración de 4 años.

Las condiciones de esta ayuda vienen establecidas en la Resolución de 20 de marzo de 2009, publicada en el BOE nº 71, de 24 de marzo de 2009, según Orden Ministerial SCO/523/2008, de 27 de febrero, BOE nº 52 de 29 de febrero de 2008.

Y para que así conste, firmo el presente certificado en Madrid,

Subdirección General de Evaluación y Fomento de la Investigación.

28049 MADRID

TELÉFONO: 91397.50.70

Le ruego que se ponga en contacto con este/a Investigador/a con objeto de concretar el plan a seguir.

Esta estancia tendrá una duración de tres meses y medio, debiendo ser obligatorio los meses de septiembre, octubre, noviembre y diciembre en dedicación completa. Se le abonará **exclusivamente** un desplazamiento de ida, a primeros de septiembre, y otro de regreso, a mediados de diciembre, desde su lugar de residencia al Centro y viceversa, para cumplir con el Plan de Trabajo, siempre que el viaje sea en diferente provincia de la de su residencia. Podrá viajar en avión clase turista, autocar o tren en segunda clase únicamente.

Una vez finalizada su estancia en el Centro, deberá enviar al Departamento de Postgrado y Especialización una breve memoria (máximo dos folios) de la labor realizada, con el visto bueno del investigador/a citado.

Para cualquier consulta referente a su beca, o a los desplazamientos le ruego que se ponga en contacto con el Departamento de Postgrado y Especialización, en el teléfono 91-585.51.31

Un cordial saludo.

Dr. Martín Martínez Ripoll

ATT. 13 AND 14 SCHOLARSHIP TO COLLABORATE IN A RESEARCH LAB

Pongo en su conocimiento que de conformidad con lo dispuesto en la Convocatoria de Beca-Colaboración, Resolución de 18 de junio de 2002 (B.O.E. de 10 de julio de 2002) y disposiciones complementarias, le ha sido concedida una beca para el presente curso académico 2002/2003 con las características que se especifican:

CLASE DE AYUDA : BECA - COLABORACION

CANTIDAD : 2.104,00

PERIODICIDAD : 5 - Licenciado en Biología

UNIVERSIDAD: UNIVERSIDAD DE VALENCIA (ESTUDI GENERAL)

DEPARTAMENTO DE COLABORACION: Departamento de Parasitología y Biología Celular

El importe de la beca le será ingresado en la cuenta y entidad bancaria indicada por Vd. en la solicitud de ayuda, cuyos datos son los siguientes:

ENTIDAD: 2077 OFICINA: 1011 DC: 97 CUEARTA: 110157595

Como alumno beneficiario tiene las obligaciones que se especifican en el anexo undécimo de la Resolución de la Secretaría de Estado de Educación y Ciencia y de Ciencias Sociales, de 18 de junio de 2002, sobre ayudas al estudio de carácter público o privado, excepto con las becas y ayudas al estudio de carácter general convocadas por la Secretaría de Estado de Educación y Ciencia y de Ciencias Sociales, y las convocadas por el Ministerio de Educación, Cultura y Deporte para el curso 2002/2003.

Contra la Resolución de la Dirección General de Cooperación Territorial y Alta Inspección, por la que se concede esta ayuda, podrá interponer recursos contenciosos en los términos establecidos en el apartado 1 del artículo 10 de la mencionada Resolución, ante la Sala de lo Contencioso-administrativo de la Audiencia Nacional, sin perjuicio del recurso potestativo de reposición que podrá interponer ante el Director General de Cooperación Territorial y Alta Inspección en el plazo de un mes.

Madrid, 16 de diciembre de 2002

The olfactory epithelium is universally regarded as the only CNS neuronal area which can be readily reached through non-invasive procedures. This unique ability to regenerate throughout the entire span of life, thus rendering small biopsies virtually non-influent on the olfactory function.

Most neurosurgeons and neurologists, possess the surgical skills required to perform olfactory epithelium biopsies, both under local and general anesthesia, with common nasal endoscopes.

After brief and careful processing and after brief culturing olfactory epithelium samples can give rise to cell lines and neurospheres. Various authors have already proposed successful culture protocols for the olfactory epithelium, but they are not yet widely used.

We have devised and validated on 10 patients a culture protocol which allowed us to obtain cell cultures and neurospheres with a remarkable output. A single biopsy measuring 2-3 mm² yield approximately 10⁶ cells, which can be easily expanded in standard T25 and T75 flasks.

Neurospheres confirmed their stemness properties and were replicable in all cases. Our protocol is simple, safe, cost effective and cost effective.

Characterization studies on the available cell lines will provide more thorough information on genotoxicity and safety, and the availability of these cell lines will make available neural cells can provide an interesting experimental model and an incredibly flexible tool for experimental studies on CNS pathologies (PD, AD, etc) and diagnostic procedures as well.

THE ROLE OF CHOLINERGIC SYSTEM IN ALZHEIMER DISEASE.

A. Ávila, J. Ávila and M. Pérez

Centro de Biología Molecular "Severo Ochoa" (CIBER-UAM), Universidad

Autónoma de Madrid, Madrid, Spain

Alzheimer's disease (AD) is the most common form of degenerative dementia and is characterized by progressive impairment in cognitive function in older people.

Brain from AD patient show several neuropathological features, including intracellular β-amyloid-containing plaques and neurofibrillary tangles, and extracellular senile plaques.

In the present work we have studied the effect of the cholinergic system on the progression of the basal forebrain. In this work, we will present results implicating involvement of the cholinergic system in AD pathogenesis. A possible linkage between the cholinergic system and the progression of the disease was investigated.

In human neuroblastoma cells SH-SY5Y treated with acetylcholine reveals no better effects in tau phosphorylation at the same time that it increases phosphatidylserine and phosphatidylethanolamine.

No effect was observed in tau phosphorylation of PEP and tau kinase.

In the other hand, amyloid-β peptide (Aβ) deposits in the brain of Alzheimer's disease (AD) significantly increase and contribute to neuronal degeneration.

Aβ, which is a neurodegenerative protein and pathway involved in the mechanism of the nervous system. We report here that M1 acetylcholine receptor activation inhibits glycogen-synthase kinase 3β (GSK-3β) activity, stabilizes phosphorylated tau and decreases the phosphorylation of the Wnt target genes, *β-catenin* and *cyclin D1*, revealing the effect of the Wnt protein cascade on Aβ toxicity. Neurons from mice that overexpress GSK-3β inactivation allow us to confirm that M1 receptor stimulation leads to GSK-3β inactivation. We conclude that the cross-talk between the muscarinic signaling and Wnt components mediate the neuroprotective effect of the M1 receptor activation.

MULTIOME TECHNOLOGY TO EXPLORE THE ROLE OF NUCLEAR UBE3A IN ANGELMAN SYNDROME

Simona Alberti¹, Alicia Rubio¹, Tommaso Pescarv¹, Leandro Bellini², Matteo Zagh², Melania Nannoni¹, Diana Giambra¹, Matteo Manzi¹, Francesco Nicassio¹, Laura Baroncelli², Italo Tonazzini², Daniela Simeoni¹

¹CNR Neuroscience Institute, Milano, Italy; ²Ospedale San Raffaele, Milano, Italy; ³Piu' Institute, CNR Neuroscience Institute, Pisa, Italy; ⁴CNR Neuroscience Institute, Pisa, Italy

Angelman syndrome is a rare neurodevelopmental imprinting disorder arising in 112,000 to 120,000 liveborns. The symptomatology includes microcephaly, seizures, ataxia, muscular hypotonia and motor delay, cognitive delay, language delay, feeding difficulties, hypotonia, hyperactivity, repetitive hand-washing, laughing, smiling and a happy behavior. Affected individuals lack the expression of UBE3A. This gene is expressed by both alleles in non-neuronal cells, while in mature neurons the paternal one is imprinted. Interestingly, the two differentially expressed isoforms of UBE3A in the brain are composed by three known isoforms, two of which are expressed predominantly in the nucleus, while the remaining one localizes mainly in the cytoskeleton. Interestingly, levels of the nuclear specific isoforms but not of the cytosolic one are significantly reduced in Angelman syndrome patients. In this poster we report, in line with this, it has been demonstrated that the majority of mutations targeting UBE3A gene causes a loss of function of the gene. We have also demonstrated that the nuclear isoforms play a major and a central role of UBE3A in the nucleus where it possibly interacts with epigenetic regulators. Hence, we decided to discuss the function of this yet poorly characterized protein in this cellular compartment.

For this purpose, we have used a multiome approach. Total RNA and total DNA from the whole genome and relative were isolated for comparative analysis. Nuclei were extracted from the cortical tissue and subjected to the same technology (Genomic ATAC-seq and RNA-seq) for comparing transcriptional and epigenetic analyses. Then, the same experiments were performed on the same samples for epigenetic analysis in the Ube3a affected brains. Computational data analysis identified the major cellular subtypes populating the ventral striatum, hippocampus and cortex. Interestingly, our results obtained by transcriptomic and epigenetic analysis suggested that mature neurons, but also other cellular subtypes developed faster in the Angelman Syndrome mice compared to the control. Most importantly, we identified and validated by Western blot analysis that the GABAergic neurons are the most affected cell type in the brain and they are strongly related to the clinical presentation of Angelman syndrome. Some of the differentially expressed genes identified in this analysis presented different open chromatin profile. This mutomic analysis allowed us to identify the most affected cell type and to highlight the molecular mechanisms involved and shed light on a group of deregulated genes that are possibly related to Angelman Syndrome. Currently, we are investigating epigenetic mechanisms and its role in the molecular player that can be responsible for the observed transcriptional and epigenetic dysregulations.

PKAN stem cell derived neurons and astrocytes show massive iron accumulation mimicking the human phenotype

¹Vita-Salute San Raffaele University; ²San Raffaele Scientific Institute, Division of Neuroscience, Proteomics of iron metabolism; ³Institute of Neuroscience-CNR; ⁴Fondazione IRCCS-Istituto Neurologico C. Besta, Milano, Italy.

Neurodegeneration associated with defective Pantothenate kinase-2 (PKAN) is an early-onset monogenic autosomal recessive disorder. The hallmark of the disease is the huge accumulation of iron in the globus pallidus brain region of patients. PKAN is caused by mutations in the PANK2 gene, that encodes the mitochondrial enzyme Pantothenate kinase-2, whose function is to catalyze the first reaction of the CoA biosynthetic pathway. So far, it is still unknown how this alteration can cause the accumulation of iron in the brain. We set up different differentiation protocols that were capable to generate either inhibitory neurons or a pure population of astrocytes. The cells obtained were analyzed for the presence of specific markers to identify the different cell types by immunofluorescence and for iron content by the specific Perls reaction. Ultrastructural, biochemical and immunological analyses were also performed to characterize the patient phenotype. We obtained striatal-like medium spiny neurons composed by about 70-80% of GABAergic neurons and 10-20% of glial cells. Within this mixed population we detected iron deposition in both PKAN cell types, however the viability of PKAN GABAergic neurons resulted strongly affected. CoA treatment was able to reduce cell death and, notably, also iron overload. A further differentiation of hPSCs in a pure population of astrocytes showed a particularly evident iron accumulation, with about 50% of cells positive to Perls stain. The analysis of these PKAN astrocytes indicated an alteration of iron metabolism, mitochondria morphology, respiratory activity, and oxidative status. Moreover, PKAN astrocytes showed signs of ferroptosis and were prone to develop a stellate phenotype, thus gaining a neurotoxic feature. This feature was confirmed in iPSC-derived astrocytes and glutamatergic neurons co-cultures, in which PKAN glutamatergic neurons resulted less viable in the presence of PKAN astrocytes. This newly generated astrocyte model is the first in vitro disease model recapitulating the human phenotype and can be exploited to deeply clarify the pathogenetic mechanisms underlying the disease.

Division of Neuroscience (Basic research)

PKAN stem cell derived neurons and astrocytes show massive iron accumulation mimicking the human phenotype.

Sonia Levi^{1,2}, Paolo Santambrogio², Maddalena Ripamonti^{1,2}, Anna Cozzi², Alicia Rubio^{2,3}, Stefano Taverna², Ivano Di Meo⁴, Chiara Cavestro⁴, Valeria Tiranti⁴

¹Vita-Salute San Raffaele University; ²San Raffaele Scientific Institute, Division of Neuroscience, Proteomics of iron metabolism; ³Institute of Neuroscience-CNR; ⁴Fondazione IRCCS-Istituto Neurologico C. Besta

Background -Neurodegeneration associated with defective Pantothenate kinase-2 (PKAN) is an early-onset monogenic autosomal recessive disorder. The hallmark of the disease is the huge accumulation of iron in the globus pallidus brain region of patients. PKAN is caused by mutations in the PANK2 gene, that encodes the mitochondrial enzyme Pantothenate kinase-2, whose function is to catalyse the first reaction of the CoA biosynthetic pathway. So far, it is still unknown how this alteration can cause the accumulation of iron in the brain.

Materials & Methods -Starting from the previously obtained hiPS-clones, we set up different differentiation protocols that were capable to generate either inhibitory neurons or a pure population of astrocytes. The cells obtained were analysed for the presence of specific markers to identify the different cell types by Immunofluorescence and for iron content by the specific Perls reaction. Ultrastructural, biochemical and immunological analyses were also performed to characterise the patient phenotype.

Results -We obtained striatal-like medium spiny neurons composed by about 70-80% of GABAergic neurons and 10-20% of glial cells. Within this mixed population we detected iron deposition in both PKAN cell types, however the viability of PKAN GABAergic neurons resulted strongly affected. CoA treatment was able to reduce cell death and, notably, also iron overload. A further differentiation of hPSCs in a pure population of astrocytes showed a particularly evident iron accumulation, with about 50% of cells positive to Perls stain. The analysis of these PKAN astrocytes indicated an alteration of iron metabolism, mitochondria morphology, respiratory activity, and oxidative status. Moreover, PKAN astrocytes showed signs of ferroptosis and were prone to develop a stellate phenotype, thus gaining a neurotoxic feature. This feature was confirmed in iPSC-derived astrocytes and glutamatergic neurons co-cultures, in which PKAN glutamatergic neurons resulted less viable in the presence of PKAN astrocytes.

Conclusions -This newly generated astrocyte model is the first in vitro disease model recapitulating the human phenotype and can be exploited to deeply clarify the pathogenetic mechanisms underlying the disease.

Esthesioneuroblastoma, also known as olfactory neuroblastoma, is a rare and poorly understood sinonasal malignancy. Most authors believe it originates from basal cells of olfactory mucosa, but its pathogenesis is still debated. Human esthesioneuroblastoma cells have already cultured *in vitro*, providing the basis for some interesting insights on the SHH signal pathway in the development of the neoplasm. Further research have also shown that olfactory neuroblastoma cells are able to differentiate into odorant-responding cells upon administration of TGF- α *in vitro*, thus confirming their "olfactory legacy".

While interesting, these results are weakened by the metastatic origin of the common esthesioneuroblastoma cell line (JFEN) commonly employed by most researchers. Upon employing the same culturing technique we validated for obtaining neural stem cells from olfactory mucosa, we were able to propagate a new cell line from primitive lesions of two out of three patients. To the authors' knowledge this is the first culture of esthesioneuroblastoma cells from primitive lesions reported in the literature.

Interestingly enough the cell line, when cultured on poly-lysine coated plates spontaneously gave rise to spheroids. Such spheroid-forming ability is postulated as one of the features of cancer stem cells, according to the epigenetic theory.

These preliminary results will allow us to perform a more thorough genomic and transcriptomic analysis of esthesioneuroblastoma cells, hopefully on a wider number of patients. Last but not least, both spheroids and cell lines could provide a new interesting *in vitro* model for drug studies, which are definitely hampered by the rarity of this malignancy.

Abstract: ERS-0541

Objectives

Esthesioneuroblastoma, also known as olfactory neuroblastoma, is a rare and poorly understood sinonasal malignancy. Most authors believe it originates from basal cells of olfactory mucosa, but its pathogenesis is still debated.

Human esthesioneuroblastoma cells have already been cultured *in vitro*, providing the basis for some interesting insights on the Sonic Hedgehog signal pathway in the development of the neoplasm. Further research have also shown that olfactory neuroblastoma cells are able to differentiate into odorant-responding cells upon administration of TGF- α *in vitro*, thus confirming their "olfactory legacy".

Methods

While interesting, these results are weakened by the metastatic origin of the common esthesioneuroblastoma cell line (JFEN) commonly employed by most researchers. Upon employing the same culturing technique we validated for obtaining neural stem cells from olfactory mucosa, we were able to propagate a new cell line from the primitive lesions of a 46-year old patient.

Results

To the authors' knowledge this is the first culture of esthesioneuroblastoma cells from primitive lesions reported in the literature. Interestingly enough the cell line, when cultured on poly-lysine coated plates spontaneously give rise to spheroids. Such spheroid-forming ability is postulated as one of the features of cancer stem cells, according to the epigenetic theory.

Conclusion

These preliminary results will allow us to perform a more thorough genomic and transcriptomic analysis of esthesioneuroblastoma cells, hopefully on a wider number of patients. Last but not least, both spheroids and cell lines could provide a new interesting *in vitro* model for drug studies, which are definitely hampered by the rarity of this malignancy.

p53 controls the mode of division in adult neural stem cells

A. Rubio^{1,2}, M.A. Marqués-Torrejón^{1,2}, A. Blázquez^{1,2}, G. Belenguer^{1,2}, I. Fariñas^{1,2}

¹Centro de Investigación Biomedica en Red sobre Enfermedades Neurodegenerativas (CIBERNED), Spain; ²Dpto. de Biología Celular, Universidad de Valencia, 46100 Burjassot, Spain

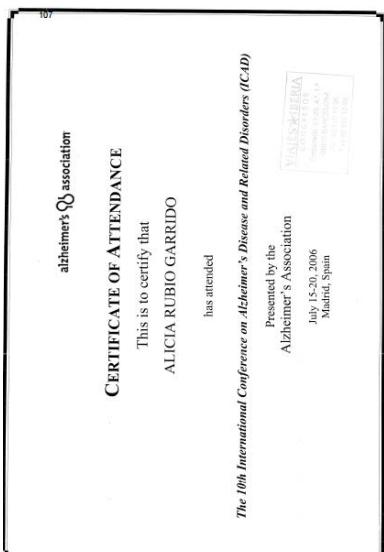

The tumor suppressor protein p53 has been shown to be a central modulator of adult neurogenesis. Using the p53-deficient mice, we found that the loss of p53 confers a higher stemness potential to neural stem cells (NSC) obtained from adult subependymal zone (SEZ). The absence of p53 enhances the multipotency potential, i.e. the probability of generating neurons, astrocytes and oligodendrocytes, and the loss of p53 expression favors the expansion of NSC by self-renewal divisions. Analyzing the localization of cell fate determinants in the first mitotic division, we demonstrate that p53-deficient cells divide asymmetrically with a higher frequency than wild-type cells, suggesting that p53 is necessary for the asymmetric cell division that is characteristic of NSC. We show that p53 regulates the gene expression of Rock, a small GTPase Rho-dependent kinase that controls actin polymerization, and that ROCK activity mediates remodeling of the cytoskeleton and polarity. Our results demonstrate a connection between the transcriptional factor p53 and cytoskeleton in cell division identifying the molecular mechanism to explain how normal levels of p53 are essential to control the cell population expansion.

Effect of Cortistatin on Tau Phosphorylation

Author: Alicia R. Rubio¹, M. Perez¹, L. Leon², J. Avila¹, Centro de Biología Molecular Severo Ochoa, Madrid, Spain.
²Molecular Biology, The Scripps Research Institute, La Jolla, CA.

The principal cytoskeletal components in a neuron are the microtubules, formed by tubulin and microtubule-associated proteins (MAPs), and the intermediate filaments, formed by vimentin and neurofilament proteins. Tissue is MAPs capable of forming aberrant filamentous when it is hyperphosphorylated in pathological situations such as Alzheimer's disease (AD). AD is a subtle dementia characterized by short memory acquisition and retention. These deficits correlate with the progressive degeneration of the cortex and hippocampus (where memory storage occurs) memory acquisition is affected and, afterwards, a progressive degeneration is found in cortical pyramidal neurons. In the hippocampus, the first changes are observed in the CA1 region, followed by the CA3 region, whose expression is restricted to gamma amino butyric acid (GABA)-containing cells in the cerebral cortex and hippocampus. The second change is observed in the CA3 region, followed by the CA1 region, where the first changes (through the depth) from the hippocampus to the cortex. The purpose of this work is to indicate the effect of cortistatin on the phosphorylation of tau protein in the hippocampus. We have used two antibodies against tau protein, one directed to the site recognized by I2B8. We also characterized tau phosphorylation in a neuron that does not express the comissinal peptide (CST-14). Our data suggest that tau immunoreactivity is higher in CST-14 mice than in control mice. In contrast, we observed a decrease in the phosphorylation by I2B8 in CST-14 mice, suggesting that the increase in phosphorylation at I2B8 and tau sites suggests that tau release from microtubules is facilitated. Authors: Alicia R. Rubio, M. Perez, L. Leon, J. Avila, Centro de Biología Molecular Severo Ochoa, Madrid, Spain.

Alzheimer's disease (AD) is a subtle dementia characterized by a progressive loss of memory acquisition together with cognitive deficits. These deficits correlate with the development of the disease. First, entorhinal cortex and hippocampus are the first regions to be affected and progress progressively. This degeneration can be followed by testing (an pathology). Cerebrotellin (CST-14), a recently discovered neuropeptide of the somatostatin family, has been found with AD and cholinergic system. CST-14 increases acetylcholine release in the hippocampus and cortex. Cholinergic deficits appear early in the AD process and correlate with the degree of dementia and the reduction in the activity of acetylcholinesterase. The effect of CST-14 on the cholinergic system in AD was also supported by the use of inhibitor of acetylcholinesterase (donepezil, rivastigmine, galantamine) for the treatment of the disease. In this work, we have tested how ACh affects tau phosphorylation at Ser 262 in hippocampus. We also characterized the effect of CST-14 on tau phosphorylation at Ser 262 in CST deficient mice. Results: In the temporal cortex, the neurons were set with antibodies of RBD1 and RBD4 antibody. In the temporal white matter the glial cells were stained with antibodies of RBD3 and a few antibodies of RBD1 and RBD4 antibody. In the temporal white matter the glial cells were stained with antibodies of RBD3 and a few antibodies of RBD1 and RBD4 antibody. In the same site, CST-14 increased the phosphorylation of RBD3 and RBD4 antibody at the same site. **Conclusion:** CST-14 increased the phosphorylation at Ser 262 in CST deficient mice.

ATT. 35 MEMBER OF A PHD COMMITTEE

ACTA DE LECTURA DE TESIS DOCTORAL

En fecha 30 de marzo de 2021 a las 11:00 horas se ha reunido y constituido el tribunal encargado de valorar la tesis doctoral de Dña Simona Covicillo, con DNI/ Pasaporte: YB6489246

El acto de defensa y evaluación de la tesis ha tenido lugar de manera telemática a través de videoconferencia, de acuerdo con la Resolución del Rectorado de la Universidad de Valencia de 7 de septiembre de 2020, y con las previsiones establecidas para las reuniones telemáticas de órganos colegiados en la Ley 40/2015 de 1 de Octubre, de Régimen Jurídico del Sector Público.

El título de la tesis es **CONTINUOUS NEURONAL INTEGRATION IN THE CEREBRAL CORTEX OF RODENTS AND HUMANS** y ha sido dirigida por Juan Nácher Roselló y Esther Castillo Gómez dentro del Programa de Doctorado en Neurociencias por la Universitat de València (Estudi General).

El tribunal encargado de la valoración de la tesis está integrado por los siguientes doctores/as:

Presidente/a: Ángel Manuel Pastor Loro
Secretario/a: Carlos Crespo Rupérez
Vocal: Alicia Rubio Garrido

El Tribunal declara abierta la sesión pública con la comparecencia del/de la doctorando/a.

El Secretario del tribunal da lectura al Artículo 14.4. y 14.7. del RD 99/2011 de 28 de enero por el que se regulan las enseñanzas de doctorado:

"14.4. La tesis doctoral se evaluará en el acto de defensa que tendrá lugar en sesión pública y consistirá en la exposición y defensa por el doctorando del trabajo de investigación elaborado ante los miembros del tribunal. Los doctores presentes en el acto público podrán formular cuestiones en el momento y forma que señale el presidente del tribunal.

14.7. El tribunal emitirá un informe y la calificación global concedida a la tesis en términos de "no apto", "aprobado", "notable" y "sobresaliente".

El tribunal podrá otorgar la mención de *cum laude* si la calificación global es de sobresaliente y se emite en tal sentido voto secreto positivo por unanimidad.

La universidad habilitará los mecanismos precisos para la materialización de la concesión final de esta mención garantizando que el escrutinio de los votos para esta concesión se realice en sesión distinta de la correspondiente a la de defensa de la tesis doctoral.

Siendo las 11:10 horas, y en aplicación de estos preceptos, el doctorando / a inicia su intervención, consistente en la exposición de la labor realizada, la metodología, el contenido y las conclusiones, con una especial mención a sus aportaciones originales.

Expuestas las opiniones de los miembros del tribunal sobre la tesis leída, y oídas las respuestas del doctorando a las cuestiones y objeciones formuladas por aquellos, el Presidente invita a los doctores presentes en la sesión pública de la videoconferencia a que formulen las cuestiones y objeciones que consideren oportunas.

Posteriormente, el tribunal invita al doctorando y al público asistente a que abandonen la sesión pública, e inician una sesión privada para la deliberación del tribunal en la que cada uno de los miembros expone su criterio respecto a la actuación del alumno en defensa de su tesis doctoral.

Concluye la deliberación del tribunal y a las 14:00 horas acuerda otorgar a la tesis doctoral la calificación de: **Sobresaliente**.

A continuación, en el caso de que la tesis se haya calificado como "sobresaliente", cada miembro del tribunal emitirá un voto secreto para la propuesta de la mención "cum laude", a través de un formulario telemático y anónimo que la escuela de doctorado remitirá a los miembros del tribunal. Si se emite en tal sentido el voto positivo por unanimidad de los miembros del tribunal se añadirá a la calificación de "sobresaliente" la mención "cum laude".

ATT.37 QUALIFICATION TO WORK WITH EXPERIMENTAL ANIMALS

RESOLUCIÓN DE 26 DE SEPTIEMBRE DE 2006, POR LA QUE SE ESTIMA LA SOLICITUD DE HOMOLOGACIÓN DE LA FORMACIÓN DE D/D^a ALICIA RUBIO GARRIDO

Vista la solicitud de homologación de la formación de D.I.Dº ALICIA RUBÍC
GARRIDO de acuerdo con la Disposición transitoria tercera del Real Decreto 1201/2005, de 10 de octubre, sobre protección de los animales utilizados para experimentación y otros fines científicos, y teniendo en cuenta los siguientes

HECHOS

PRIMERO.- Que dicha solicitud ha tenido entrada en el Departamento dicha solicitud con fecha de 4/24/2006, acompañada de documentación complementaria.

SEGUNDO.- Que por la Subdirección General de Ordenación de explotaciones y Buenas Prácticas Ganaderas se ha propuesto con fecha 25 de septiembre estimar dicha solicitud.

FUNDAMENTOS DE DERECHO

I.- Que esta Dirección General es competente para la resolución de la solicitud, de conformidad con lo previsto en los artículos 3.o), 9.1, 12.4 y 18.7 y la Disposición transitoria tercera del Real Decreto 1201/2005, de 10 de octubre, en relación con el artículo 7 del Real Decreto 1417/2004, de 11 de junio, por el que se desarrolla la estructura orgánica básica del Ministerio de Agricultura, Pesca y Alimentación.

II.- Que del examen de la documentación aportada por el solicitante se deduce que acredita debidamente el cumplimiento del periodo de tiempo establecido al efecto en la mencionada Disposición transitoria tercera del Real Decreto 1201/2005, de 10 de octubre, para la categoría solicitada.

Por todo lo expuesto, vista la Ley 30/1992, de 26 de noviembre, el Real Decreto 1201/2005, de 10 de octubre, y demás normativa de general y concreta aplicación, RESUELVO:

ESTIMAR la solicitud de D/D^a, ALICIA RUBIO GARRIDO, de homologación de la formación para la categoría B de acuerdo con la Disposición transitoria tercera del Real Decreto 1201/2005, de 10 de octubre, sobre protección de los animales utilizados para experimentación y otros fines científicos, presentada mediante escrito con entrada en el Departamento el día 4/4/2006.
