## TRAINING OR RESEARCH ACTIVITY

description of activity
In my Ph.D Studies entitled: Application of transition metal complexes in homogeneous catalysis.
My main fields of interest are the following:
Synthesis of new transition metal complexes
Spectroscopy (IR, NMR, DRX, microanalysis, mass spectrometry, ...)
Electrochemistry,
Catalysis
DFT and TD-DFT calculation
Docking molecular
Biological activities
I have attended courses, some of which are related to:
Spectroscopy techniques (IR, NMR, X-ray diffraction ....)
Computational chemistry: DFT and TD-DFT by a Gaussian09
In the time spented in department of Chemical Sciences-University of Naples Federico II/ Italy under the supervision of Professor Francesco Ruffo, we focused on the synthesis of iron complexes from Schiff base ligands, the characterization and identification carried out on different spectral methods as:
<b><sup>1</sup>H and <sup>13</sup>C NMR</b>
<b>IR spectroscopy</b>

# UNIVERSITÀ DEGLI STUDI DI MILANO

The synthesized complexes applied Lewis acid catalysis for conversion of biomass.

Another part of the work is the characterization of some metal transition complexes by 2D NMR and X-ray diffraction
