

UNIVERSITÀ DEGLI STUDI DI MILANO

TO MAGNIFICO RETTORE OF UNIVERSITA' DEGLI STUDI DI MILANO

ID CODE 6101

I the undersigned asks to participate in the public selection, for qualifications and examinations, for the awarding of a type B fellowship at Dipartimento di Oncologia ed Emato-Oncologia

Scientist- in - charge: Giorgio Scita

[Name and surname]

CURRICULUM VITAE

PERSONAL INFORMATION

Surname	Green
Name	Brenda

PRESENT OCCUPATION

Appointment	Structure
Project Leader	IFOM

EDUCATION AND TRAINING

Degree	Course of studies	University	year of achievement of the degree
Degree	Bachelor in Chemical Engineering, Bachelor in Biochemistry	University of Ottawa	2007
Specialization			
PhD	Biomedical Engineering	University of Toronto	2018
Master	Biomedical Engineering	University of Toronto	2012
Degree of medical specialization			
Degree of European specialization			
Other			

REGISTRATION IN PROFESSIONAL ASSOCIATIONS

Date of registration	Association	City

UNIVERSITÀ DEGLI STUDI DI MILANO

FOREIGN LANGUAGES

Languages	level of knowledge
Italian	B1

AWARDS, ACKNOWLEDGEMENTS, SCHOLARSHIPS

Year	Description of award
2023	My First AIRC Grant
2019	Marie Skłodowska-Curie Post-Doctoral Fellowship Award
2016	Natural Sciences and Engineering Research Council of Canada scholarships

TRAINING OR RESEARCH ACTIVITY

Description of activity

Mechanical deformability is emerging as a biomarker for aggressivity of tumor cells, as several studies link cell and nuclei deformability with increased metastases. In the current project, we developed a microfluidic device that can simulate the mechanical forces experienced by tumor cells in their natural environments. The system was tested by employing MCF10DCIS.com breast cancer spheroids as a model of early- stage breast ductal carcinoma *in situ* that can progress to invasive carcinoma when injected into immuno-compromised mice. Using widefield microscopy, we are able to track tumor spheroids as they deform through narrow constrictions. The spheroids are subsequently collected and analyzed for changes in transcriptome and invasion capacity.

During my PhD, I validated a microfluidic device to capture rare cancer cells in blood, and we showed that this device out-performed the gold standard commercially available Cell Search technology. I worked with oncologists at the Princess Margaret Hospital in Toronto to track CTCs in metastatic prostate cancer patients over 3 years. We optimized the fluidic system for CTC detection from prostate cancer, lung cancer and mesothelioma patients and published our work in Analytical Chemistry 2019: “Phenotypic Profiling of Circulating Tumor Cells in Metastatic Prostate Cancer Patients Using Nanoparticle-Mediated Ranking” and EBioMedicine 2020: “A liquid biopsy for detecting circulating mesothelial precursor cells: A new biomarker for diagnosis and prognosis in mesothelioma”.

At ETH Zurich, we developed a nanopore system to measure deformability of single breast cancer spheroids in real time. Here we demonstrated that metastatic MCF10CA1a.cl1 passed through pores more rapidly than normal breast cells MCF10A, and were more likely to disengage from pores and reverse direction. This work was published in NanoLetters: “Pore shape defines paths of metastatic cell migration. Nano Lett 2018”.

PROJECT ACTIVITY

Year	Project
2023-Present	<ul style="list-style-type: none">▫ Created reproducible microfluidic systems to link biophysical properties of tumor clusters to disease state.
2019-2023	<ul style="list-style-type: none">▫ Managed a project for the development and validation of a novel microfluidic device for capture of circulating tumor cells (CTCs) and clusters from whole blood.
2014-2018	<ul style="list-style-type: none">▫ Employed silicon-oxide microscale devices for analysis of breast cancer cell migration through pores of variable size and aspect ratio, for diagnostic and therapeutic purposes. Carried out experiments using cell transfection protocols and high resolution live-cell fluorescence imaging.
2010-2014	<ul style="list-style-type: none">▫ Designed and implemented microfluidic devices for pancreatic islet culture and vascular regeneration.
